# Competencies:

## A competency framework for nurses working in Parkinson's disease management

2nd Edition

---

# Acknowledgements

---

**Parkinson's Disease Society and Parkinson's Disease Nurse Specialist Association for their support with funding this document**

**Parkinson's Disease Nurse Specialist Association (PDNSA)**

**Executive Committee members**

Alison Forbes, PDNS, London

Ruth Rendell, Neurology Nurse Specialist, Norwich and Norfolk

Linda Caie, PDNS, PDNSA Chair, Aberdeen

Geraldine Brand, PDNS, PD Surg, London

Annette Hand, Parkinson's Nurse Consultant, North Tyneside

**RCN Neurosciences Forum**

**Executive Committee members**

Richard Warne, MS Nurse Consultant, Gloucestershire

Alison Dick, MND, Nurse Specialist, Belfast

Shuna Coleville, MND, Nurse Specialist, Dundee

Nikki Embrey, MS Lecturer Practitioner, Birmingham

Cath Waterhouse, Lecturer Practitioner Neurosciences, Sheffield

Mary Davies, Clinical Nurse Manager, Swansea

**The Parkinson's Information Network (PINK)**

**The Surgical Movement Disorders Nurse Steering Group**

**The Parkinson's Disease Society Nurse Development Group**

Lynn Osbourne, Parkinson's Nurse Consultant, Cornwall

Steve Ford, Chief Executive, Parkinson's Disease Society

Lesley Carter, Nurse Development Manager, Parkinson's Disease Society

Caroline Noble, PDNS, Peterborough

Dr Carl Clarke, Neurologist and Reader in Neurology, Birmingham

Dr Doug MacMahon, Consultant Physician, Cornwall

**We would also like to thank the Parkinson's Disease Nurse Specialists, too numerous to mention, who attended stakeholder days in London, Edinburgh, Cardiff and Rome, and in particular:**

Annette Hand, Nurse Consultant Parkinson's Disease, North Tyneside General Hospital, for all her support in co-ordination and facilitation

Philip Scullion, Coventry University, former Chair RCN Neurosciences Forum for driving the competencies forward within the RCN

Sue Thomas, RCN Nursing Policy and Practice Adviser and Project Manager

Nikki Hale, Senior Fellow – Competence Development, Royal College of Nursing/Skills for Health for mapping the competencies to the Knowledge and Skills Framework

# Foreword

---

This revised competency framework describes the knowledge and skills required by nurses to manage the care of people living with Parkinson's disease in any healthcare setting and offers signposts for good practice. It addresses a number of political and professional issues, including Agenda for Change (DH, 1999), the need for leadership in nursing, the need for the development of standards, fitness for practice and the increased focus on work-based and lifelong learning and clinical supervision for nurses. This revised document has now also been mapped to the NHS Knowledge and Skills Framework.

These competencies have been developed by Parkinson's Disease Nurse Specialists (PDNS) across the United Kingdom. The nurses who contributed did so either through the value clarification exercise, stakeholder days, subgroups or during consultation. The aim was to develop key competencies for qualified nurses caring for people with Parkinson's in any healthcare setting.

The importance of a highly skilled and educated nursing workforce is well recognised by healthcare commissioners and people with Parkinson's themselves. This framework is therefore a collection of the core competencies PDNSs felt were central to their effective performance in Parkinson's nursing. The Parkinson's Disease Society (PDS), Parkinson's Disease Nurse Specialist Association (PDNSA) and Royal College of Nursing (RCN) have collaborated as one body to produce these competencies to maintain the highest level of standard,

competence and professional integrity. Their joint aim is to facilitate national leadership in the Parkinson's disease nursing specialty. The framework comprises core competencies underpinned by consultant nurse areas of practice:

- Expert practice
- Practice development
- Leadership
- Lifelong learning
- Consultancy

We envisage the framework will initially be used to help with training and development activities. However, elements of the framework are also relevant to nurses in non-specialist areas such as district nursing. The framework also describes the competencies a PDNS needs to achieve and maintain their specialist practice as specialist nurses so that care is lawful, safe, effective and accountable. The framework can be used in the following ways:

- To facilitate continuing professional development on an individual level
- To help managers and individual nurses identify gaps in practice
- To identify at both personal and organisation level specific training needs
- To inform the commissioning development and delivery of education and training for nurses

The framework could also be used to aid performance appraisal and, in the longer term, to aid recruitment and retention in Parkinson's nursing.

**Sue Thomas**

RCN Nursing Policy and Practice Adviser and Project Manager

**Linda Caie**

PDNSA Chair

**Steve Ford**

Chief Executive, Parkinson's Disease Society

# Introduction

---

Competence can be defined as: “The state of having the knowledge, judgement, skills, energy, experience and motivation required to respond adequately to the demands of one’s professional responsibilities” (Roach, 1992).

This integrated career and competency framework for Parkinson’s disease management is an important step forward. It addresses a number of political and professional issues, and initiatives including:

- Agenda for Change (DH, 1999)
- The NHS Knowledge and Skills Framework and the Development Review process (DH, 2004)
- need for leadership in specialist nursing
- need for the development of standards
- NHS Plan (DH, 2000) and its equivalent in Scotland, Wales and Northern Ireland
- increased focus on work-based and lifelong learning plus supervision
- changing focus towards professional rather than academic accreditation

Parkinson’s disease is a complex, incurable condition that affects over 120,000 people in the UK. Its effects can be mitigated through careful management and timely intervention. However, to achieve this, collaboration between patients, doctors and the multidisciplinary team is essential. This is exactly what a Parkinson’s Disease Nurse Specialist (PDNS) can help bring about.

In line with the principles of the NHS plan, the Government aims to modernise health services in this country. Among other things, the plan proposes that nurses will have an expanding role as nurse specialists and nurse consultants.

Developing new roles for nurses generates opportunities to expand the range of services available for clients with conditions like Parkinson’s, in addition to exciting career development prospects for nurses. The Nursing and Midwifery Council is providing competencies for advanced nursing practice. Education and training agendas need to reflect these changes if nurses are to advance their

clinical roles. Nurses new to Parkinson’s nursing require a clear framework to enable them to develop their skills and knowledge continually according to their position in the nursing career trajectory. Experienced PDNSs require a framework to help them advance and progress.

This document outlines a national framework of competencies that PDNSs and nurses with an interest in Parkinson’s can use to practise as safe, effective and accountable practitioners in Parkinson’s care and management. This work has been led by the Parkinson’s Disease Nurse Specialist Association (PDNSA), facilitated by the RCN Neurosciences Forum and funded by Parkinson’s Disease Society and the PDNSA.

## Agenda for Change

This competency framework was primarily developed to support nurses delivering services in the community, and not specifically to support the NHS Knowledge and Skills Framework (NHS KSF), but it can be used to complement the NHS KSF dimensions by providing specific competencies related to Parkinson’s disease management and may support career and pay progression. It should not, however, be used as a means to determine pay banding under the Agenda for Change pay modernisation process.

## Overview of the NHS Knowledge and Skills Framework

The NHS Knowledge and Skills Framework defines and describes the level of knowledge and skill NHS Staff require to deliver quality services. It provides a single consistent comprehensive and explicit framework on which to base review and development for all staff (DH, 2004).

The NHS KSF is made up of 30 dimensions. These dimensions identify broad functions that are required by the NHS to enable it to provide a good quality service to the public.

As the NHS KSF is a broad generic framework that focuses on the application of knowledge and skills – it does not describe the exact knowledge and skills individuals need to develop for Parkinson’s disease nursing specifically. The competencies detailed throughout the following pages help to do this as does specific training courses in Parkinson’s disease management.

**The six core and specific dimensions in the NHS Knowledge and Skills Framework (DH, 2004) are:**

- communication
- personal and people development
- health, safety and security
- service improvement
- quality
- equality and diversity

There are 24 other dimensions that apply to some jobs but not all. The specific dimensions are grouped into themes:

- Health and wellbeing
- Estates and facilities
- Information and knowledge
- General

## SECTION 1

# What is a competency framework?

A nurse is competent when (s)he possesses the skills and abilities required for lawful, safe and effective professional practice without direct supervision. Competencies can be thought of as underlying characteristics of individuals that result in effective performance. They are described as a combination of knowledge, skills, motives and personal traits. Competency in this sense is generally seen in the way someone behaves. A competency framework is a collection of competencies that are thought to be central to effective performance.

This competency framework can be used to help with training and development activities for all nursing staff working in the Parkinson's speciality. The framework describes the competencies that PDNSs need to achieve and maintain in order for their care to be lawful, safe and effective.

The framework can be used to:

- facilitate continuing professional development on an individual level
- help managers (or clinical mentors, including doctors) and individual nurses to review their strengths and identify gaps in their competency to highlight their specific training and development needs
- inform the commissioning, development and delivery of education and training for PDNSs
- support professionals locally by providing a framework to help recruitment and selection procedures

The framework can also be used to aid performance appraisal and, in the long term, to aid recruitment and retention within the speciality. Although the value of the framework will be maximised at local practice level, it will also assist universities to plan and deliver programmes that should better meet the needs of services.

## Competence-based learning programmes

Considerable work has already been invested in the development of competency-based frameworks by the RCN, and a validated competency framework

has been developed. It could be argued that one approach be adopted as a standard. However, each learning programme offers a different perspective according to the work environment and infrastructure for support, mentoring and assessment. In addition, some NHS Trusts may already have established competency learning programmes. Therefore, specific competencies for Parkinson's can be adapted from the national framework and be incorporated with existing local learning packages.

## Defining the levels of nursing practice

In 1999, a new career structure was proposed to replace clinical grades for nurses, midwives and health visitors. This structure incorporated the new nurse, midwife and health visitor consultant posts that are significantly extending the career opportunities for nurses who wish to climb the career ladder, but remain in clinical practice. Further to this, in September 2006, the Department of Health released their document 'Modernising Nursing Careers: Setting the Direction', which includes planned action for the four health departments across the UK to "work with stakeholders to map nursing roles and competencies to the National NHS Careers Framework" (DH, 2006 p18). This Career Framework consists of nine levels and, for the purposes of this document, potential descriptor levels will be included in brackets against those levels described in the career trajectory. The career framework for health can be viewed at [www.skillsforhealth.org](http://www.skillsforhealth.org)

## The competency levels

The competency levels in this document were originally based on the career trajectory and aligned to Benner's work from Novice to Expert – Level 1 (Levels 1–4): healthcare assistant. HealthCare Assistants (HCAs) are at the first level of the career trajectory which equates to levels 1, 2, 3 and 4 of the Career Framework for Health (Skills for Health, 2005). The competency statements in this document

does not address the needs of this group of workers. The Parkinson's Disease Society has developed training courses for HCAs equivalent to National Vocational Qualifications (SNVQ in Scotland) where their competencies are addressed.

### **Registered practitioner/competent nurse (Level 5 of the Career Framework for Health)**

This level defines the entry point for registered nurses to the Parkinson's disease speciality. At this level, the registered practitioner in the Parkinson's service will be developing expertise to take on tasks such as assessment and management of patients throughout the four stages of Parkinson's. They will demonstrate working knowledge of the key specialist psychosocial and technical treatments that are appropriate to the client group. Generally, these nurses work on a regular, but not necessarily full-time, basis, with people who have Parkinson's.

With experience, the nurse's interpersonal skills develop so that they can initiate discussions on the impact of Parkinson's on personal relationships and daily living activities. They will learn when and how to refer clients directly to other healthcare professionals, such as physiotherapists, speech and language therapists, and how to document client care.

### **Experienced/proficient nurse (Level 6 of the Career Framework for Health)**

At this level the registered practitioner in the Parkinson's service will have developed expertise to use detailed theoretical and practical knowledge in Parkinson's management. Some knowledge is at the forefront of the field and will involve a critical understanding of theories and principles. The practitioner will be able to demonstrate mastery of methods and tools in complex care, and demonstrate innovation in terms of methods used while having the ability to devise and sustain arguments to solve problems.

### **Senior registered practitioner (Level 7 of the Career Framework for Health)**

Often regarded as specialist or advanced practice, this is the extension and expansion of the registered

practitioner role. PDNSs practising at this level of clinical practice work according to local protocols to co-ordinate the comprehensive care of clients, who could equally be cared for by doctors. The nurses can work autonomously without asking the advice of a doctor. Any nurse working at this level is required to work within the boundaries of their own knowledge and competence, and refer to or seek advice/opinions from medical colleagues for cases beyond their clinical expertise. Selected treatments will expand this nursing role through independent prescribing.

The expected workload of senior registered practitioners differs between settings, depending on local need, resources and infrastructure. In day care settings some nurses are responsible for total provision of care, others only see patients who have previously been seen by medical colleagues, while some nurses see clients who could equally be cared for by doctors. Despite the different types or levels of client care that PDNSs provide, there are core competencies that are central to all levels of senior registered PDNS nursing practice.

### **Consultant practitioner (Level 8 of the Career Framework for Health)**

Previously defined as higher level of practice, this level generally reflects the role of the nurse consultant. Nurse consultant posts are developed to satisfy the individual needs of the service in which they are located. However, all posts need to conform to a common core of expectations outlined by the NHS Executive, which are:

- expert practice
- professional leadership and consultancy
- education, training and development
- practice and service development, research and evaluation

## Role Level Descriptors

Taken from Skills for Health (2006) Career Framework for Health Methodology Testing Report, March 2006, Appendix 1

Level	Skills and knowledge	Supervision	Regulation, professional and vocational competence
5	Use broad theoretical and practical knowledge that is often specialised within a field and show awareness of limits to knowledge base. Develop strategic and creative responses in researching solutions to well defined concrete and abstract problems. Demonstrate transfer of theoretical and practical knowledge in creating solutions to problems.	Manage projects independently that require problem solving where there are many factors, some of which interact and lead to unpredictable change. Show creativity in developing projects. Manage people and review performance of self and others. Train others and develop team performance.	Clinical staff will be regulated healthcare professionals. Evaluate own learning and identify learning needs necessary to undertake further learning. Formulate responses to abstract and concrete problems. Demonstrate experience of operational interaction within a field. Make judgements based on knowledge of relevant social and ethical issues.
6	Use detailed theoretical and practical knowledge of a field. Some knowledge is at the forefront of the field and will involve a critical understanding of theories and principles. Demonstrate mastery of methods and tools in a complex and specialised field and demonstrate innovation in terms of methods used. Devise and sustain arguments to solve problems.	Demonstrate administrative design, resource and team management responsibilities in work and study contexts that are unpredictable and require that complex problems are solved where there are many interacting factors. Show creativity in developing projects and show initiative in management processes that include the training of others to develop team performance.	Clinical staff will be regulated healthcare professionals. Consistently evaluate own learning and identify learning needs. Gather and interpret relevant data in a field to solve problems. Demonstrate experience of operational interaction within a complex environment. Make judgements based on social and ethical issues that arise in work or study.
7	Use highly specialised theoretical and practical knowledge, some of which is at the forefront of knowledge in the field. This knowledge forms the basis for originality in developing and/or applying ideas. Demonstrate critical awareness of knowledge issues in the field and at the interface between different fields. Create a research-based	Demonstrate leadership and innovation in work and study contexts that are unfamiliar, complex and unpredictable and that require solving problems involving many interacting factors. Review strategic performance of teams.	Clinical staff will be regulated healthcare professionals. Demonstrate autonomy in the direction of learning and a high level understanding of learning processes. Solve problems by integrating complex knowledge sources that are sometimes incomplete and in new and unfamiliar contexts.

	diagnosis to problems by integrating knowledge from new or interdisciplinary fields and make judgements with incomplete or limited information. Develop new skills in response to emerging knowledge and techniques.		Demonstrate experience of operational interaction in managing change within a complex environment. Respond to social, scientific and ethical issues that are encountered in work or study.
8	Use specialised knowledge to critically analyse, evaluate and synthesize new and complex ideas that are at the most advanced frontier of a field. Extend or redefine existing knowledge and/or professional practice within a field or at the interface between fields. Research, conceive, design, implement and adapt projects that lead to new knowledge and new procedural solutions.	Demonstrate substantial leadership, innovation and autonomy in work and study contexts that are novel and require the solving of problems that involve many interacting factors.	Clinical staff will be regulated healthcare professionals. Demonstrate capacity for sustained commitment to development of new ideas or processes and a high-level understanding of learning processes. Critical analysis, evaluation and synthesis of new and complex ideas and strategic decision making based on these processes. Demonstrate experience of operational interaction with strategic decision making capacity within a complex environment. Promote social and ethical advancement through actions.

## Structure of the framework

The framework consists of three levels of clinical practice, and is centred on the client experience in the multidisciplinary Parkinson's disease healthcare setting, as well as general professional nursing practice.

Each level of practice has a number of areas of competency that reflect the core aspects of professional nursing practice. There are also those that are specific to Parkinson's with a particular focus on the client experience:

- Competent nurse (Level 5)
- Experienced/proficient nurse (Level 6)
- Senior practitioner/expert nurse (Level 7/8)

The areas of competency contain the specific competencies. Each contains an overarching statement that gives an overall flavour of what the competency is about. A number of statements, known as behavioural indicators, represent the specific behaviours you would expect to see if the competency is applied effectively. The behavioural indicators reflect the knowledge, skills and attitudes required for effective, accountable and acceptable client care.

## SECTION 2

# How to use the competency framework

This document is for nurses working with people who have Parkinson's and their carers. It should be used in combination with, and as a complement to, the UK-wide RCN Core Competency Framework, together with the Skills for Health Neurological competency framework (available at [www.skillsforhealth.org.uk](http://www.skillsforhealth.org.uk)). A number of competencies within the Long Term Conditions Case Management – Community Matrons Framework would also be applicable to nurses developing competency in this field and would be a useful reference point. See [www.skillsforhealth.org.uk](http://www.skillsforhealth.org.uk)

Also, for those nurses working within the NHS, it should be used in conjunction with the KSF. This document focuses specifically on technical treatments related to Parkinson's nursing.

The framework should be used for developing and empowering nurses working in Parkinson's management, as well as a means of managing performance within professional development and appraisal schemes. In the NHS, this has to be undertaken in conjunction with the KSF for the individual's role. Practitioners using the framework will need to produce evidence for each competency in order to demonstrate that they have achieved the competence at the identified/desired level. Various approaches should be combined, rather than selecting one approach.

## Producing evidence

The suggestions below are an example of what could be used as evidence. The examples are not exhaustive, and alternative assessments may be appropriate in different settings:

- observation and critical analysis of everyday practice
- audit and notes review
- case presentations
- observed structured clinical examinations (OSCEs)
- excerpts from a reflective diary, with self-assessment of competence, identified development needs and an action plan
- testimony of the individual's contribution to nursing practice, such as the co-ordination of care management for an individual or a group of patients

- active contribution to policy groups, developing or revising guidelines, standards, audits
- evidence of change or project management
- certificate of attendance and an evaluation of the outcomes of study days or courses
- demonstration of evidence-based practice, with supportive literature, protocols etc
- planning, delivering and evaluating teaching sessions
- individual performance review
- 360° feedback process
- personal and professional development portfolio
- active involvement in clinical supervision, mentorship and multidisciplinary meetings
- demonstration of ability to liaise with the multidisciplinary team and external agencies
- a relevant contribution to a verbal discussion about patient care that is appropriate for the individual nurses' level
- contribution to local or national documents or journals about service delivery, education etc
- leading, or contributing to, a journal club or other in-house teaching and learning sessions
- written documentation about patient care that is appropriate for the individual nurse's level

## Assessing competency

Although the strength of the competency framework lends itself to assessment of nursing practice at local level in partnership with medical and allied health colleagues, assessment may also take place through university courses and formal examinations. The competency framework provides guidance for assessment, but alternative assessments may be appropriate in different settings. Those performing the assessments should have adequate expertise and training in the assessment and mentoring process, in addition to appropriate knowledge of Parkinson's care. As an example, the medical clinical lead in the NHS Trust should have clinical responsibility for the service and expect to be involved in the assessment process.

## Evaluating the framework

### Evaluation methods

There are two measures that can be used to evaluate the effectiveness of the competency framework:

- **process measures** – focus groups to determine if and how the framework is being used, ease of use, problems, gaps in information.
- **outcome measures** – pre-competency baseline assessment of representative sample to establish existing level of competence according to the framework. This would also indicate gaps in competence and regional practice patterns in order to inform the commissioning, development and delivery of education and training for Parkinson's nurses. Repeat survey after period of time to establish if level of competence has changed among sample participants.

## SECTION 3

# Developing the framework

### Values clarification exercise

The competency framework has been developed following extensive consultation. Initially, PDNSs and nurses with a special interest in Parkinson's completed a values clarification exercise (Manley) to articulate their values and beliefs in Parkinson's nursing. A postal questionnaire was circulated to a database of known PDNSs, obtained from the PDNSA and PINK network. Of the 245 questionnaires circulated, 195 were returned completed. There was a good geographical spread with responses from each NHS region in England, and from Wales, Scotland, Northern Ireland and the Channel Islands. Responses were collated and themes generated from the contributions received.

PDNSs responding to the questionnaire said that the purpose of Parkinson's nursing is to:

- maintain and improve quality of life for people with Parkinson's
- provide support and education to people with Parkinson's and their families in any location
- support and provide a seamless service from diagnosis to advanced care
- educate other healthcare professionals

The PDNSs believed that this could be achieved by:

- a multidisciplinary, client-centred approach to care that has a strong focus on independence
- highly motivated nurses
- easy access to care

The questionnaire highlighted the core work of the PDNS as:

- communication – providing support and advice to patients and carers
- assessment
- symptoms management
- medicines management
- education and awareness of professionals
- referral to multidisciplinary team
- research and audit

### Consultation involving people with Parkinson's and their carers

As part of developing the competency framework, a consultation exercise was undertaken with people with Parkinson's and their carers to find out what they valued from their interactions with a PDNS. A focus group exercise and postal questionnaires were used to obtain views from 240 patients and carers who were at varying stages of the disease process.

The value of the PDNS from this exercise was defined as:

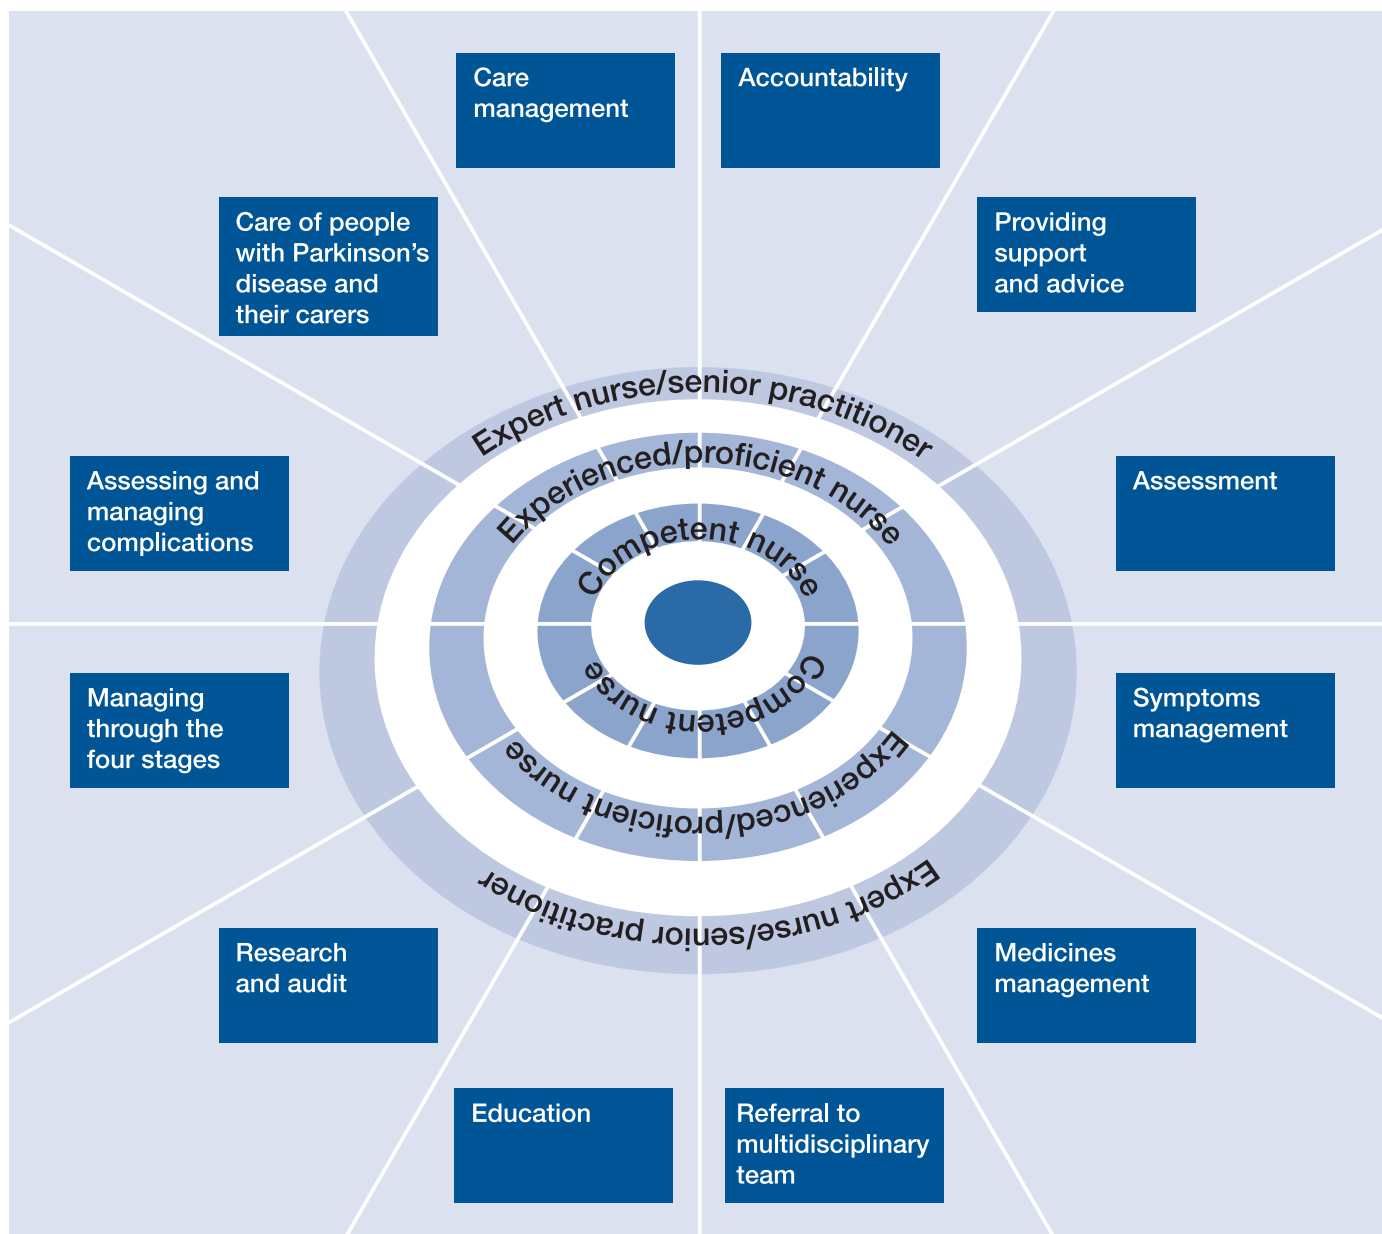

- availability of the nurse and their ability to respond quickly
- their expert knowledge
- their ability to signpost and navigate the healthcare system
- Information-giving

The red flag issues people with Parkinson's raised were:

- time it takes to see nurse soon after diagnosis
- no single source of information for Parkinson's patients – currently appropriate services and benefits are spread over many disparate organisations
- patients 'drop out of view' at various stages of treatment and have to be re-registered or re-referred
- review process for patients is inconsistent, both in time and quality
- support in the palliative care stages is unclear

PDNS core competencies were subsequently drafted and sent out for consultation. The framework developed was divided into sections, as shown opposite:

## Competency framework

## SECTION 4

# The competency framework for nurses working in Parkinson's management

---

## Specialist competency 1: case management

Competent nurse (Level 5)	Experienced/proficient nurse (Level 6)
<p><b>Causes of Parkinson's disease</b></p> <p>Develops knowledge of the potential causes of Parkinson's.</p> <p><b>Classification</b></p> <p>Shows awareness of the four-stage management concept of Parkinson's, and how each stage differs:</p> <ol style="list-style-type: none"> <li>1 diagnosis</li> <li>2 maintenance</li> <li>3 complex</li> <li>4 palliative</li> </ol> <p><b>Pathology</b></p> <p>Develops an understanding of the aetiology of Parkinson's.</p> <p><b>Management</b></p> <p>Develops knowledge of:</p> <ul style="list-style-type: none"> <li>■ symptoms of Parkinson's</li> <li>■ parkinsonism</li> <li>■ management options</li> <li>■ functional surgery</li> <li>■ possible adverse effects of medications</li> </ul> <p><b>Outcome measurement</b></p> <p>Shows awareness of commonly used disability scales used in the management of Parkinson's.</p> <p>Shows awareness of the need to undertake qualitative outcome assessment for people with Parkinson's and their carers.</p> <p><b>Psychological and social impact</b></p> <p>Develops awareness of:</p> <ul style="list-style-type: none"> <li>■ cognitive impairment</li> <li>■ neuropsychiatric features</li> <li>■ psychological impact</li> <li>■ emotional need</li> <li>■ relationship and communication issues and their potentials effect on people with Parkinson's and their carers</li> </ul> <p><b>Indicative KSF Dimensions and levels:</b></p> <p>Core 1 level 3 Core 2 level 3 Core 5 level 2 IK2 level 2</p>	<p><b>Causes of Parkinson's disease</b></p> <p>Links the pathology of Parkinson's to management options.</p> <p>Explains and discusses the pathology of Parkinson's to people with Parkinson's, their carers and health and social care professionals.</p> <p><b>Classification</b></p> <p>Understands the pathological differences underlying the Parkinson's and parkinsonism.</p> <p>Demonstrates knowledge of diagnostic criteria and understands the use of drugs in management of Parkinson's.</p> <p>Demonstrates knowledge of the four-stage management concept and liaises with the Multi Disciplinary Team (MDT).</p> <p><b>Pathology</b></p> <p>Explains how Parkinson's occurs.</p> <p>Describes and discusses the aetiology of Parkinson's and interprets this to the people with Parkinson's and their family.</p> <p><b>Management</b></p> <p>Describes/discusses/explains Parkinson's to other professionals, people with Parkinson's and carers:</p> <ul style="list-style-type: none"> <li>■ Parkinson's and parkinsonism</li> <li>■ difference between usual and unusual presentations of Parkinson's</li> <li>■ links signs with symptoms and treatment options using evidence-based management protocols</li> <li>■ functional surgical options</li> <li>■ management and rehabilitation options</li> <li>■ use of drug therapy in the management of Parkinson's</li> </ul> <p><b>Outcome measurement</b></p> <p>Uses and interprets results from a range of scales, including quality of life in clinical settings for people with Parkinson's and their carers, and discusses management options.</p> <p>Understands common limitations associated with the clinical use of scales.</p> <p>Peer reviews existing, or develops new, qualitative patient outcome measures that can be adapted/enhanced to measure elements of patient care.</p> <p><b>Psychological and social impact</b></p> <p>Uses knowledge of patterns of psychological and social impact in Parkinson's to respond and to manage the needs appropriately.</p> <p>Shows awareness of potential psychological and social impact in relation to functional surgery.</p> <p><b>Indicative KSF Dimensions and levels:</b></p> <p>Core 1 level 3      Core 4 level 2      Core 5 level 3 Core 2 level 3      IK2 level 3</p>

## Senior practitioner/expert nurse (Level 7/8)

### Causes of Parkinson's disease

Teaches experienced staff about new theories and research developments, and expand their level of knowledge and critical analysis.

### Classification

Discusses the application of management in each distinct stage of Parkinson's.

### Pathology

Outlines the current theories of Parkinson's to experienced staff.

Explains the natural history data in Parkinson's.

Explains pathology in relation to functional surgery.

### Management

Educates experienced health professionals on the disease presentations and symptoms.

Works with other professionals to design and implement care pathways in anticipation of potential problems.

Designs, develops and implements care pathways in relation to functional surgery.

Educates experienced health professionals about functional surgery interventions.

Has an understanding of the wider political environment and how it impacts on service redesign.

### Outcome measurement

Identifies scales appropriate for specific clinical measurement.

Understands the significance of reliability and validity data related to outcome measures.

Identifies gaps in the service, and initiates strategies to address them from qualitative outcome measures.

### Psychological and social impact

Demonstrates expertise in the recognition of subtle psychological and social impact and its effect on assessment and management.

Demonstrates expertise in assessing and recognising psychological and social impact pre- and post-functional surgery.

Manages these, or refers to other members of the MDT as appropriate.

### Indicative KSF Dimensions and levels:

Core 1 level 4	HWB2 level 4
Core 2 level 4	HWB4 level 4
Core 4 level 4	HWB5 level 4
Core 5 level 4	IK2 level 4
Core 6 level 4	G1 level 3

## Specialist competency 2: accountability

Competent nurse (Level 5)	Experienced/proficient nurse (Level 6)
<p><b>Scope of practice</b></p> <p>Works within the scope of the most recent NMC Code of professional conduct.</p> <p>Discusses scope of professional practice in relation to current role.</p> <p><b>Accountability for service demands</b></p> <p>Develops and manages own caseload, recognising unacceptable workload and identifies when it is appropriate to seek support.</p> <p><b>Documentation</b></p> <p>Maintains accurate records and applies current knowledge of data protection and confidentiality issues.</p> <p><b>Evidence-based practice</b></p> <p>Accesses and works to best practice guidelines using evidence-based practice where available. ## Senior practitioner/expert nurse (Level 7/8)

### Scope of practice

Shows awareness of the codes of practice of other healthcare professions, and where the line is for the duty of care in the MDT. Gains agreement as to where responsibility lies in the MDT.

### Accountability for service demands

Takes a strategic overview of the service, exploring alternatives for managing case load. Is accountable for recommending redesigns to the service that involves other professionals, and justifies additional member of the team.

### Documentation

Develops documentation that facilitates and improves communication between primary, secondary and tertiary care, such as joint records held by the MDT, hand-held notes or IT solutions.

### Evidence-based practice

Identifies gaps in the evidence base and initiates strategies to address them.

### Informed consent

Advises, supervises and co-ordinates peer group and senior staff on the ethical issues of informed consent.

### Relationships with industry

Uses experience and expertise to influence the pharmaceutical and commercial industry to improve patient care.

Understands and can interpret the Association of the British Pharmaceutical Industry (ABPI) code of conduct.

## Specialist competency 3: providing support and advice to people with Parkinson's and carers

Competent nurse (Level 5)	Experienced/proficient nurse (Level 6)
<p><b>Self-management</b> Develops a relationship based on trust. Develops an understanding of the strategies used in self-management.</p> <p><b>Advocacy</b> Acts as an advocate for people with Parkinson's and their family at team level to remove barriers to care and services.</p> <p><b>Service user development</b> Develops awareness of issues related to service development and service user involvement.</p> <p><b>Telephone management</b> Demonstrates effective listening and questions skills appropriate to telephone communication, ensuring the caller feels confident that their needs have been understood.</p> <p><b>Telephone management/prioritising time</b> Manages time effectively by assessing the urgency of calls.</p> <p><b>Indicative KSF dimensions and levels:</b> Core 1 level 3 Core 2 level 3 Core 4 level 2 Core 5 level 2 Core 6 level 3</p>	<p><b>Self-management</b> Encourages the individual and their family to foster a self-management approach.</p> <p><b>Advocacy</b> Acts as an advocate for people with Parkinson's and their family at a departmental/unit/community team level. Participates in user groups, looking at service developments within resource constraints. Develops active contact with patient services.</p> <p><b>Service user development</b> Provides opportunities for people with Parkinson's to play a part in the development in local services.</p> <p><b>Telephone management</b> Effectively assesses and prioritises need, based on telephone communication. Agree realistic expectation with person with Parkinson's. Manages crisis and unexpected calls confidently.</p> <p><b>Telephone management/prioritising time</b> Agrees realistic expectations in the management of telephone-dependent patients.</p> <p><b>Indicative KSF dimensions and levels:</b> Core 1 level 3 Core 4 level 2 Core 5 level 3 Core 6 level 3 HWB4 level 3</p>

## Senior practitioner/expert nurse (Level 7/8)

### Self-management

Empowers the individual and their family to identify and reach realistic goals of self-management.

### Advocacy

Advocates on behalf of the local Parkinson's population at a strategic/trust/PCT/CHP-commissioning level to ensure services are developed effectively. Ensures the users' voice is recognised in service implementation and development, within resource constraints.

### Service user development

Creates opportunities at different levels for people with Parkinson's to play a part in the development of local services.

### Telephone management relationships

Develops strategies to monitor and manage effectively issues raised during telephone contact.

### Telephone management/prioritising time

Identifies the reasons for a patient's telephone dependency and develops strategies to meet them.

## Specialist competency 4: assessment, planning, implementation and evaluation

Competent nurse (Level 5)	Experienced/proficient nurse (Level 6)
<p><b>Assessing the patient</b></p> <p>Obtains consent from individuals before initiating assessment.</p> <p>Undertakes an holistic patient assessment to determine accurately actual and potential problems that might require attention.</p> <p>Uses an evidence-based and person-centred assessment approach to identify healthcare and education needs.</p> <p>Adjusts assessment and history, taking into account age, gender and cultural background.</p> <p>Assesses patients' level of vulnerability due to age and disability.</p> <p>Assesses appropriate additional information about a patient and communicates that information.</p> <p>Assesses the ability and motivation of the patient and carer to self-manage care shows knowledge of clinical rating scales i.e. Barthel ADL.</p> <p>Using assessment data to implement and evaluate a plan of action</p> <p>Agrees a care plan in partnership with patient and, in collaboration with others, implements a care plan for the client group using an evidence-based and patient-centred approach.</p> <p>Sets and monitors patients' goals in collaboration with patient and other members of the team using an evidence-based and patient-centred approach.</p> <p>Evaluates a care plan for, and with, the client group using an evidence-based and patient-centred approach. Liaises between the patient/carers and other members of the MDT, including other agencies, to achieve the care plan.</p> <p>Uses assessment data to provide the rationale for clinical decision-making Assimilates the information gathered at assessment to provide the rationale for clinical decision-making.</p> <p><b>Documentation of assessment, planning, implementation and evaluation</b></p> <p>Documents clear and accurate information about the patient arising from the assessment and care planning process, and communicates this to others.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3            Core 2 level 3            Core 5 level 2            Core 6 level 3            HWB2 level 3            HWB4 level 2            HWB5 level 3            IK2 level 2</p>	<p><b>Assessing the patient</b></p> <p>Assesses health and wellbeing needs when those needs are complex and change across the case load.</p> <p>Has knowledge of clinical rating scales.            For example:</p> <ul style="list-style-type: none"> <li>■ Modified Hoehn and Yahr</li> <li>■ Webster Scale</li> <li>■ UPDRS</li> <li>■ Swab and England</li> <li>■ EuroQuol</li> <li>■ PDQ 39</li> <li>■ CAPSIT – PD</li> </ul> <p>Accurately conducts a health and risk assessment using (these) recognised assessment tools, and together with a physical examination, interprets and acts on findings. Discusses assessment outcomes with patients/clients and colleagues, enabling them to think through the risks, their effective management and the need for referral to others.</p> <p><b>Using assessment data to implement and evaluate a plan of care</b></p> <p>Makes decisions in collaboration with patients and other team members about care priorities for a range of patients.</p> <p><b>Specialist health and risk assessment, planning, implementation, evaluation and clinical decision-making</b></p> <p>Undertakes specialist health and risk assessment and care planning processes consistent with evidence-based practice and own scope of practice.</p> <p>Has knowledge of specialist clinical rating scales. For example:</p> <ul style="list-style-type: none"> <li>■ mini mental state examination</li> <li>■ Geriatric Depression Scale (GDS)</li> <li>■ CAMCOG</li> <li>■ DRS2</li> </ul> <p><b>Team standards in assessment, planning, implementation and evaluation</b></p> <p>Monitors the assessment and care planning processes provided by the team for a range of patients in client group.</p> <p>Facilitates others in the development of competence in specialist assessment and care planning processes.</p> <p><b>Indicative KSF Dimensions and levels:</b></p> <p>Core 1 level 3      HWB2 level 3      HWB5 level 3            Core 2 level 3      HWB3 level 2      IK2 level 2            Core 5 level 3      HWB4 level 3      G5 level 3</p>

## Senior practitioner/expert nurse (Level 7/8)

### Providing expert assessment, planning, implementation and evaluation

Decides on assessment priorities in the care setting for a range of patients.

Expertly interprets all of the information available. Makes a justifiable assessment of people's health and wellbeing needs and their prognosis, together with risks to their health and wellbeing in the shorter and longer term. Transfers and applies knowledge to new needs and issues, explaining clearly to colleague his/her own reasoning processes as the assessment proceeds.

Works nationally or internationally in partnership to develop and validate clinical rating scales that improve clinical assessment.

Undertakes appropriate specialist assessment in relation to function surgery, and expertly interprets results.

### Using assessment data to implement and evaluate a plan of care

Contributes to the decision-making process of options relating to functional surgery.

Makes decisions on service redesign to deliver best practice. Acts as a catalyst for change.

### Implementing organisational approaches to enable patients to receive skilled assessment, planning, implementation and evaluation

Develops referral pathways for patients requiring other treatments.

Develops local networks for supporting staff and disseminating information about specialist assessment and care planning processes.

Enables Essence of Care benchmarks to be integrated into patient assessment and care planning processes.

### Developing a culture that constantly evolves assessment strategies and care planning processes

Identifies situations where the scope of practice needs to be expanded to improve the service and subsequent educational needs.

## Specialist competency 5: symptoms management

Competent nurse (Level 5)	Experienced/proficient nurse (Level 6)
<p><b>Developing knowledge</b></p> <p>Recognises and describes signs and symptoms of common conditions in people with Parkinson's.</p> <p>Has up-to-date information about the treatment and management of common symptoms.</p> <p>Implements actions and knowledge arising from own reflections and clinical supervision.</p> <p>Implements local action plans in relation to essence of care benchmarking.</p> <p><b>Understanding patient need</b></p> <p>Identifies the physiological, psychological, social, cultural, developmental, sexual and spiritual needs of the person.</p> <p>Identifies the individual's coping and adjustment strategies, their motivation and support mechanisms.</p> <p><b>Practice</b></p> <p>Demonstrates ability to identify and manage problems, or signpost people with Parkinson's to appropriate source of help and support.</p> <p><b>Accountability</b></p> <p>Understands the principles of accountability in relation to symptom management.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3            Core 2 level 3            Core 5 level 2            Core 6 level 2            HWB2 level 3            HWB5 level 3</p>	<p><b>Developing expertise</b></p> <p>Demonstrates ability to identify clinical problems and undertakes timely intervention and management of symptoms.</p> <p>Demonstrates awareness of the various sources of pharmaceutical information and uses a full range of strategies to help relieve/address symptoms.</p> <p>Provides the team with local expertise on aspects of Essence of Care and appropriate National Service Frameworks.</p> <p>Uses and acts on knowledge of normal and uncharacteristic physiology in caring for patients.</p> <p><b>Understands patient need</b></p> <p>Critically evaluates patient data to select and implement appropriate symptom management, and reviews all relevant information about the individual's condition and symptoms.</p> <p>Anticipates the effects of symptoms on the people with Parkinson's and carer/family, adjusts care to enhance wellbeing and responds appropriately. Anticipates the likely course of interventions, treatment and therapies, and uses own specialist knowledge to achieve the best outcome.</p> <p>Identifies the most appropriate activities to assist the individual to manage their symptoms, and encourages the individual to report any significant change in their symptoms.</p> <p>Provides information to the individual on the potential variations in the pattern, severity and duration of their symptoms.</p> <p><b>Practice</b></p> <p>Performs accurate and comprehensive clinical assessments and generates appropriate treatment options. Monitors symptoms and recommends any changes in consultation with the patient and consultant/neurologist/GP.</p> <p>Reviews whether activities to manage the patient's symptoms are effective for the individual.</p> <p><b>Accountability</b></p> <p>Documents and maintains accurate and coherent records.</p> <p>Liaises and communicates across primary and secondary care.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3            Core 2 level 3            HWB2 level 3            HWB4 level 3            HWB5 level 3            IK2 level 2</p>

## Senior practitioner/expert nurse (Level 7/8)

### Demonstrating expertise

Demonstrates all the characteristics of expertise, specifically:

- uses holistic practice knowledge
- knows the patient
- gets quickly to the heart of the matter
- Implements comprehensive knowledge into practice
- acts as a catalyst by creating understanding, enabling new ways of working, and by influencing colleagues' practice
- displays creative, innovative and challenging behaviour
- demonstrates self-awareness by challenging own practice and seeking improvement.

## Specialist competency 6: medicines management

Competent nurse (Level 5)	Experienced/proficient nurse (Level 6)
<p><b>Developing knowledge</b></p> <p>Develops knowledge of the pharmacokinetic and pharmacodynamic properties of the drugs used in the management of Parkinson's.</p> <p>Recognises drugs that may be contraindicated in the management of Parkinson's or drugs that can cause drug-induced parkinsonism.</p> <p><b>Practice</b></p> <p>Identifies and agrees own role in relation to drug management for the person with Parkinson's.</p> <p>Provides support and information to the individual and their carers throughout the provision of medication.</p> <p>Ensures that health and safety measures relevant to the administration of medication are undertaken.</p> <p>Reviews all relevant information about the individual's condition and symptoms.</p> <p><b>Accountability</b></p> <p>Understands the principles of accountability in relation to drug management.</p> <p>Keeps accurate, legible and complete records.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3            Core 2 level 3            Core 3 level 2            Core 4 level 2            HWB2 level 3            HWB3 level 1</p>	<p><b>Developing expertise</b></p> <p>Discusses and explains the drugs used in the management of Parkinson's disease to the person with Parkinson's, their carers and other health and social care professionals.</p> <p>Shows awareness of the implications of functional surgery on medicine management.</p> <p><b>Practice</b></p> <p>Performs accurate and comprehensive clinical assessments, and generates appropriate treatment options.</p> <p>Identifies the risks of medication, and explains any side effects to the individual.</p> <p>Establishes whether the medication is being correctly administered as instructed, and identifies any reasons for non-compliance.</p> <p>Monitors drug therapy and recommends any changes in consultation with the person with Parkinson's, consultant and neurologist, to the GP.</p> <p>Encourages the individual to monitor their reaction to medication and to report any concerns or problems.</p> <p>Reviews the outcomes of the medication on the individual's symptoms and overall condition.</p> <p>Titrate anti-Parkinson's medication, as per locally agreed protocol, with the consultant.</p> <p>Conducts Apomorphine Challenge as per shared care guidelines and local protocol.</p> <p><b>Accountability</b></p> <p>Documents and maintains accurate and coherent records.</p> <p>Liaises and communicates across primary and secondary care.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3            Core 3 level 2            Core 5 level 3            HWB2 level 3            HWB3 level 2            HWB4 level 3            HWB5 level 3            IK2 level 2</p>

## Senior practitioner/expert nurse (Level 7/8)

### Demonstrating expertise

Independent/supplementary nurse prescriber working closely with the local prescribing team for support.

Influences prescribing policy at local and national levels.

Supports nurses through independent and supplementary nurse prescribing.

Advises and supports health professionals in medicine management pre- and post-functional surgery.

### Practice

Works with the local drugs and therapeutics committee to develop protocols and shared care guidelines.

Collaborates and conducts consultation in partnership with the person with Parkinson's, and develops individual clinical management plans.

Applies evidence base and local formularies in prescribing practice.

Monitors prescribing practice through follow-up and within clinical management plan, and makes referral back to the independent prescriber where appropriate.

Conducts specialist pre-and post-surgical assessments.

Manages the titration of anti-Parkinson's medicines in relation to functional surgery.

Provides expert medicine management during pre- and post-functional surgery assessment according to locally agreed guidelines/protocols.

### Accountability

Works within legislative framework within independent and supplementary nurse prescribing.

Follows guidance set out in the NMC standards for medicine management.

Is responsible for maintaining their continued professional development.

## Specialist competency 7: referral to the multidisciplinary team (MDT)

Competent nurse (Level 5)	Experienced/proficient nurse (Level 6)
<p><b>Multidisciplinary liaison</b></p> <p>Identifies health, social, voluntary, and independent sector staff with interest in Parkinson's.</p> <p>Establishes MDT working relationships.</p> <p><b>Influence and leadership</b></p> <p>Understands the role of the PDNS as defined in the role of the Parkinson's nurse specialist, or the role of the surgical movement disorder specialist nurse. Develops an awareness of how own role impacts on service delivery locally to people with Parkinson's.</p> <p><b>Professional networking</b></p> <p>Identifies opportunities to join effective networking groups.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3            Core 2 level 3            Core 3 level 2            Core 6 level 2            HWB3 level 1</p>	<p><b>Multidisciplinary liaison</b></p> <p>Maintains and expands MDT working.</p> <p>Fosters closer working relationships with health, social, voluntary and independent sectors.</p> <p><b>Influence and leadership</b></p> <p>Communicates and promotes effectively the role of the PDNS/ surgical movement disorder specialist nurse as a pivotal member of the MDT.</p> <p>Develops own leadership skills through recognised courses.</p> <p><b>Professional networking</b></p> <p>Maximises the use of effective networking across social and health care boundaries, e.g. interest groups promoting service delivery and development.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3            Core 2 level 3            Core 4 level 2            Core 5 level 3            Core 6 level 3</p>

## Senior practitioner/expert nurse (Level 7/8)

### Multidisciplinary liaison

Develops new working practices with health, social, voluntary and independent sectors.

### Influence and leadership

Influences local service provision by Parkinson's nursing leadership, and participates in multi-disciplinary projects.

Develops leadership skills of others through participation in leadership training and mentorship.

### Professional networking

Initiates new networking opportunities through meeting people working in other specialist areas. Participates on a national and international basis.

### Indicative KSF dimensions and levels:

Core 1 level 4

Core 2 level 4

Core 4 level 4

## Specialist competency 8: education

Competent nurse (Level 5)	Experienced/proficient nurse (Level 6)
<p><b>Developing knowledge</b></p> <p>Attends educational programmes for MDT, nursing, the voluntary sector and other non-professional groups in managing all aspects of Parkinson's.</p> <p>Participates in local clinical networks.</p> <p><b>Teaching</b></p> <p>Teaches within limitations of own Parkinson's knowledge.</p> <p>Identifies opportunities to develop own learning needs for teaching and sharing knowledge.</p> <p><b>Use of evaluation tools</b></p> <p>Responds to evaluation/feedback on teaching sessions.</p> <p><b>Mentorship</b></p> <p>Makes effective use of a mentor to explore ideas and devise a personal development plan.</p> <p><b>Teaching people with Parkinson's disease</b></p> <p>Understands the possible barriers to learning, and uses strategies to maximise and evaluate learning.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 2 level 3 G1 level 1</p>	<p><b>Developing expertise</b></p> <p>Initiates and develops effective local clinical networks, education programmes and discussion groups for MDT, Primary Care Trusts (PCTs), Community Health Partnerships (CHPs), health authorities and other professional groups.</p> <p><b>Teaching</b></p> <p>Shares specialist Parkinson's knowledge and evidence-based practice in a variety of settings. Uses a range of knowledge sources to develop own clinical practice and that of others, using formal teaching and/or writing for local publications.</p> <p>Undertakes teaching at higher education institutions and on undergraduate and graduate training programmes.</p> <p><b>Use of evaluation tools</b></p> <p>Uses a range of education evaluation tools to find out the opinions of others. Incorporates feedback into future sessions/courses.</p> <p><b>Mentorship</b></p> <p>Acts as a mentor to PDNSs new in post.</p> <p><b>Teaching people with Parkinson's</b></p> <p>Promotes the education of people with Parkinson's by encouraging patients to take responsibility for health and wellbeing, emphasising the concept of wellness in living with Parkinson's. Runs support/education groups for people with Parkinson's.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3 Core 2 level 3 G1 level 2</p>

## Senior practitioner/expert nurse (Level 7/8)

### Demonstrating expertise

Identifies and responds to the learning needs of the MDT, concentrating on experienced colleagues who need to develop advanced knowledge and skills. Develops and sustains productive partnerships, playing a part in the development of managed clinical networks and educational programmes.

### Teaching

Leads on the development of regional higher education institutions. Ensures inclusion of Parkinson's training in undergraduate and graduate training programmes.

Disseminates knowledge by writing for publications and speaking at conferences. Is acknowledged as a valuable resource for Parkinson's teaching and expertise.

### Use of evaluation tools

Promotes innovative ways to optimise learning. Uses evaluation to develop new programmes for high-level practice.

### Mentorship

Acts as a role model at local, national and international level to help others to challenge practice and promote professional development.

### Teaching people with Parkinson's

Leads the development of local and regional education initiatives for people with Parkinson's, and participates in the development of national education initiatives that incorporate the concept of the expert patient. Maximises the use of developing technologies as they become available, for example direct access between clinicians and patients via web-based systems.

### Indicative KSF dimensions and levels:

Core 1 level 4

Core 2 level 4

G1 level 4

## Specialist competency 9: research and audit

Competent nurse (Level 5)	Experienced/proficient nurse (Level 6)
<p><b>Understanding research</b></p> <p>Understands what is meant by evidence-based care.</p> <p>Accesses evidence relevant to Parkinson’s management and shares this resource with others.</p> <p><b>Undertaking research</b></p> <p>Supports existing multidisciplinary Parkinson’s research in the local area where there is a recognised need for specialist nursing input.</p> <p><b>Patient trials</b></p> <p>Explains to patients the meaning of common terms and concepts used in research methodologies (eg. randomisation, blinded trials, informed consent, placebos), and what these may mean for them.</p> <p><b>Audit</b></p> <p>Identifies components of PDNS/surgical movement disorder specialist nurse role that are likely to contribute most to quality outcomes in local service delivery.</p> <p>Develops awareness of audit tools and identifies support to undertake audit.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3            Core 2 level 3            Core 4 level 2            Core 5 level 2            IK2 level 2</p>	<p><b>Understanding research</b></p> <p>Uses critical appraisal skills to differentiate between research that will improve practice and promote change on an individual and organised level.</p> <p><b>Undertaking research</b></p> <p>Contributes to the design and practical implementation of local multidisciplinary Parkinson’s disease research projects, representing a specialist nursing perspective.</p> <p><b>Patient trials</b></p> <p>Enables patients to have realistic expectations about participating in research and evidence-based treatment/lifestyle changes.</p> <p><b>Audit</b></p> <p>Carries out audit of key aspects of own service using a range of approaches, e.g. standards, patient satisfaction, complaints monitoring and quantitative data, such as telephone advice and response times.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 2 level 3            Core 4 level 2            Core 5 level 3            HWB1 level 3            HWB4 level 3            IK2 level 3            G2 level 1</p>

## Senior practitioner/expert nurse (Level 7/8)

### Understanding research

Influences policy at organisational, regional and national levels by highlighting evidence in support of proposed practice/service developments in the field of Parkinson's.

### Undertaking research

Identifies multidisciplinary research questions relevant to daily practice, and with supervision, designs, carries out and reports on these projects.

### Patient trials

Uses in-depth clinical and research knowledge to empower patients to make well-informed decisions about participating in Parkinson's research.

### Audit

Contributes to the design of PDNS and surgical movement disorder specialist nurse data as part of multidisciplinary clinical audit projects at organisational, local and national level.

# Specialist competency 10: management through four stages

## Management through four stages

Competent nurse (Level 5)	Experienced/proficient nurse (Level 6)
<p><b>Developing knowledge</b></p> <p>Shows awareness of the four-stage management concept, and the potential needs of patients at each stage:</p> <ul style="list-style-type: none"> <li>■ diagnosis</li> <li>■ maintenance</li> <li>■ complex</li> <li>■ palliative care</li> </ul> <p>Undertakes interventions expected of a registered nurse at each stage, consistent with evidence-based practice, own scope of practice and legislation.</p> <p>Applies skills and knowledge to meet individuals' changing needs.</p> <p>Uses a full range of nursing strategies to relieve the psychological and spiritual impact of the physical and emotional aspects of illness on individuals and families throughout each stage.</p> <p>Acts on knowledge of the key interventions, treatments and therapies appropriate to the client group.</p> <p>Undertakes monitoring and assessment as requested.</p> <p>Demonstrates awareness of risk factors and has active listening skills.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3            Core 2 level 3            HWB2 level 3            HWB3 level 1            HWB5 level 3            HWB7 level 3</p>	<p><b>Developing expertise</b></p> <p>Makes decisions about priorities in each stage in collaboration with people with Parkinson's and other team members, and acts as a named contact.</p> <p>Monitors the assessment and care planning processes provided by the team, and facilitates others in the development of competence in management processes.</p> <p>Demonstrates knowledge of theoretical frameworks and educational philosophies underpinning behaviour change, and understanding of biophysical and psycho-social factors affecting self-management.</p> <p>Develops and ensures delivery of educational material and supportive networks that foster empowerment. Works with people with Parkinson's to facilitate lifestyle changes in response to changes in condition or circumstances.</p> <p><b>Anticipation of crises</b></p> <p>Orders tests and specialist investigations, and using risk assessment history and interpretation, acts on the results.</p> <p><b>Monitoring the condition</b></p> <p>Influences therapeutic decisions, and demonstrates counselling skills.</p> <p>Develops guidelines/protocols, and shows proficiency in developing and delivering education.</p> <p>Manages and co-ordinates individual patient care and education, and negotiates personal care plans. Provides or refers for psychological support as required.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3            Core 2 level 3            Core 5 level 3            HWB1 level 2            HWB2 level 3            HWB4 level 3            HWB5 level 3            G1 level 2</p>

## Senior practitioner/expert nurse (Level 7/8)

### Demonstrating expertise

Advises on expert management, particularly in highly distressing circumstances.

Develops specialised programmes of care, and highly specialised advice.

Identifies service deficits and develops a strategic plan for the service.

Works in collaboration with higher education institutes and other education providers to meet education needs.

Initiates and leads research and promotes evidence-based practice.

Develops best practice, e.g. through leadership.

## Specialist competency 10: management through four stages

### Management through four stages: professional and personal development

Competent nurse (Level 5)	Experienced/proficient nurse (Level 6)
<p><b>Reflective practice</b></p> <p>Recognises the importance of clinical supervision and attends on a regular basis.</p> <p>Identifies critical incidents from which learning will occur. Ensures own supervision needs are met at an appropriate level with identified mentor.</p> <p><b>Develop knowledge</b></p> <p>Attend/has access to recognised training course for management of people with Parkinson's.</p> <p>Recognises the importance of networking.</p> <p>Ensures protected time for study and peer networking.</p> <p>Uses reflection to prioritise areas for personal development, formulating a personal development plan with line manager and mentor.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 2 level 3</p>	<p><b>Reflective practice</b></p> <p>Improves the quality of the service through reflection on positive and negative clinical experiences.</p> <p>Provides mentorship for less experienced nurses.</p> <p><b>Develop knowledge</b></p> <p>Maintains professional development through access to national study days and courses.</p> <p>Shares knowledge and best practice through participation in local and national specialist networks.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 2 level 3</p>

## Senior practitioner/expert nurse (Level 7/8)

### Reflective practice

Initiates and provides skilled supervision for members of team.

Develops action learning sets.

Supports and guides other nurse mentors.

### Develop knowledge

Leads a managed clinical network to educate.

Shares experience and knowledge at regional and national levels.

Develops skills in lecturing and facilitating for Parkinson's diploma and degree courses.

Accesses and participates in study days at national and international level.

Influences policy at local and national levels.

### Indicative KSF dimensions and levels:

Core 2 level 4

# Specialist competency 11: assessing and managing complications

## Assessing and managing complications: psychological problems

Competent nurse (Level 5)	Experienced/proficient nurse (Level 6)
<p><b>Developing knowledge</b></p> <p>Recognises psychological problems, and reports to specialist nurse and/or medical practitioner.</p> <p>Documents and reports any abnormal findings.</p> <p>Shows awareness of how this might affect people with Parkinson's and their carer, and advises accordingly.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3</p> <p>Core 6 level 2</p> <p>HWB3 level 1</p>	<p><b>Developing expertise</b></p> <p>Assesses mental health status using relevant tools such as mini mental state examination and depression rating scales.</p> <p>Provides support and advice to patients and carers to help them deal with emotional problems.</p> <p>Refers appropriately to the mental health team if mental health problems are found, and works with the team.</p> <p>Educates carers relating to the management of neuro-psychiatric symptoms.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3</p> <p>Core 2 level 3</p> <p>HWB2 level 3</p> <p>HWB4 level 3</p> <p>IK2 level 2</p>

## Senior practitioner/expert nurse (Level 7/8)

### Demonstrating expertise

Advises other members of the MDT about the management of neuro-psychiatric symptoms, including drug treatment.

Plans and manages the care of patients with psychiatric complications using others for support and advice when needed.

Develops local and national guidelines for the management of the neuro-psychiatric problems associated with Parkinson's.

Lectures/educates peers and colleagues at local and national levels.

Recognises when end-of-life care is most appropriate. Supports the patient, family, carers and colleagues during this process.

# Specialist competency 11: assessing and managing complications

## Assessing and managing complications: motor and non-motor fluctuation

Competent nurse (Level 5)	Experienced/proficient nurse (Level 6)
<p><b>Developing knowledge</b></p> <p>Shows awareness of occurrence of motor and non-motor fluctuations and end-of-dose problems.</p> <p>Shows awareness of appropriate referral system for problems.</p> <p>Demonstrates an awareness of the physiology relating to motor and non-motor fluctuations.</p> <p>Under supervision identifies and articulates patient needs, and suggests an appropriate lifestyle change.</p> <p>Demonstrates ability to evaluate current practice and refer back to consultant/neurologist/GP as necessary.</p> <p>Shows awareness of the tools available to monitor motor and non-motor fluctuations.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3</p> <p>Core 2 level 3</p> <p>HWB1 level 1</p> <p>HWB2 level 3</p> <p>HWB4 level 2</p> <p>HWB5 level 3</p> <p>IK2 level 2</p>	<p><b>Developing expertise</b></p> <p>Demonstrates ability to work within set guidelines and protocols for the management of motor and non-motor fluctuations.</p> <p>Demonstrates ability to interpret assessment tools and gives appropriate advice to patients with suggested lifestyle changes or treatment changes (within agreed guidelines or protocols).</p> <p>Demonstrates ability to supervise and teach junior colleagues about motor and non-motor fluctuations.</p> <p>Demonstrates ability to communicate the issues related to motor and non-motor fluctuations with patient, carer, health and social care professionals.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3</p> <p>Core 2 level 3</p> <p>Core 5 level 3</p> <p>HWB2 level 3</p> <p>HWB5 level 3</p> <p>IK2 level 2</p> <p>G6 level 1</p>

## Senior practitioner/expert nurse (Level 7)

### Demonstrating expertise

Demonstrates ability to interpret the findings of investigations independently.

Demonstrates ability to articulate the evidence base and changes practice accordingly.

Accepts referrals from other nursing and medical staff.

Identifies appropriate services and products to meet patients' needs.

Facilitates the development of new services to meet patients' needs.

Develops training programmes, guidelines and protocols to manage motor and non-motor fluctuations in patients with Parkinson's.

# Specialist competency 11: assessing and managing complications

## Assessing and managing complications: promoting independence

Competent nurse (Level 5)	Experienced/proficient nurse (Level 6)
<p><b>Developing knowledge</b></p> <p><b>Knowledge base</b></p> <p>Demonstrates knowledge of the physiological social and spiritual needs of people with Parkinson’s, and the ability to recognise and describe signs of common problems affecting the people with Parkinson’s that may compromise self-care.</p> <p><b>Interventions</b></p> <p>Uses advocacy, interpersonal and listening skills to ensure people with Parkinson’s are able to express their needs and receive appropriate care.</p> <p>Maintains safety, privacy, respect and dignity of people with Parkinson’s.</p> <p>Demonstrates relevant and current knowledge of health promotion issues.</p> <p>Assesses the person’s ability to manage their own care independently or/and refers to ensure their needs are met.</p> <p><b>Management</b></p> <p>Provides support and advice for people with Parkinson’s to be cared for in the environment of their choice, adapted to suit their needs.</p> <p>Engages in multi-agency collaboration, and places the patient and the carer at the centre of decision making.</p> <p>Demonstrates effective communication skills with the person with Parkinson’s/carers and health and social care professionals.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3            Core 2 level 3            Core 3 level 2            Core 6 level 3            HWB1 level 1            HWB2 level 3            HWB3 level 1</p>	<p><b>Developing expertise</b></p> <p><b>Knowledge base</b></p> <p>In caring for people with Parkinson’s identifies the physical, social, psychological cultural and spiritual needs arising from normal ageing.</p> <p>Ensures the patient is given the information they need to make informed care decisions.</p> <p><b>Interventions</b></p> <p>Provides information and support to promote and encourage patient empowerment and decision-making relating to care and support.</p> <p>Undertakes a comprehensive holistic assessment of any changes in a patient’s condition and refers appropriately to the MDT.</p> <p>Demonstrates ability to implement treatment regimens competently within agreed guidelines or protocols.</p> <p>Implements knowledge and skills of effective health promotion to meet the needs of people with Parkinson’s.</p> <p><b>Management</b></p> <p>Engages and develops multi-agency collaboration across health and social care. Demonstrates understanding of legal, moral and ethical issues relating to people with Parkinson’s.</p> <p>Understands the impact of National Service Frameworks, Essence of Care and other government plans and policies.</p> <p>identifies, acknowledges and promotes activities that benefit people with Parkinson’s.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3            Core 2 level 3            Core 4 level 2            Core 5 level 3            Core 6 level 3            HWB1 level 2            HWB2 level 3            HWB4 level 3            HWB5 level 3</p>

## Senior practitioner/expert nurse (Level 7)

### Demonstrating expertise

#### Knowledge base

Critically appraises the available research and evidence base to ensure best practice in managing people with Parkinson's .

Actively identifies areas for research into self-care, or inability for people with Parkinson's to self-care.

Participates in developing and publishing the evidence base and best practice guidelines.

#### Interventions

Critically assesses, plans, implements and evaluates planned care that incorporates the holistic needs of people with Parkinson's.

To achieve best outcomes, initiates decision making based on expertise and experience.

Initiates and accurately interprets a range of investigations relating to the condition and needs of the patient.

Demonstrates autonomy of practice and decision-making in meeting the needs of people with Parkinson's.

#### Management

To develop and improve care for people with Parkinson's. Contributes and collaborates at local and national levels to developing and implementing National Service Frameworks, NICE Guidelines and other government plans, policies and strategies. Critically analyses the legal, moral and ethical issues relating to people with Parkinson's.

Effectively champions the needs of people with Parkinson's through patient advocacy and active empowerment.

# Specialist competency 11: assessing and managing complications

## Assessing and managing complications: concurrent illness

Competent nurse (Level 5)	Experienced/proficient nurse (Level 6)
<p><b>Identification</b></p> <p>Identifies signs of concurrent illness and reports to medical or specialist nursing staff.</p> <p>Documents and reports abnormal findings, and shows awareness of how concurrent illness might affect Parkinson's disease and advises accordingly.</p> <p><b>In-patient care – acute setting Environment</b></p> <p>Demonstrates ability to advise on appropriate adaptation of the environment to care for people with Parkinson's.</p> <p>Demonstrates good interpersonal and communication skills with all health and social care professionals.</p> <p>Demonstrates ability to refer patients to the appropriate MDT member to ensure the patient receives holistic in-patient care.</p> <p>Practises and advocates respect for privacy and dignity of the patient while in hospital.</p> <p>Provides information and support to the person with Parkinson's, family/carer and health and social care professionals.</p> <p>Demonstrates ability to undertake a general holistic assessment of the person with Parkinson's.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3            Core 6 level 3            HWB1 level 1            HWB2 level 3            HWB3 level 1            HWB4 level 2            HWB5 level 3</p>	<p><b>Identification</b></p> <p>Initiates appropriate preliminary investigations, and takes a comprehensive patient assessment and history.</p> <p>Knows and uses appropriate referral systems, and gives advice on continuation of current medication.</p> <p><b>In-patient care – acute setting Environment</b></p> <p>Takes an active role in the risk assessment process and identifies risk assessment clinical indicators.</p> <p>Undertakes environmental and equipment audit and reports findings (if appropriate).</p> <p>Shows excellent interpersonal and communication skills with all health and social care professionals.</p> <p>Demonstrates ability to provide comprehensive patient management advice to non-specialist and junior staff. Uses a holistic nursing model appropriate to the care of people with Parkinson's to assess, plan, implement and evaluate in-patient nursing care.</p> <p>Shows an understanding of the physiological signs, symptoms and the risks associated with an emergency admission of people with Parkinson's, and advises on Parkinson's care in hospital admissions/procedures.</p> <p>Trouble-shoots and responds to problems relating to the care of people with Parkinson's in hospital and responds to queries from lay people and other health care professionals about hospital care.</p> <p>Develops or maintains local guidance for the care of people with Parkinson's in hospital. Sets and maintains standards of care and educates nurses and other carers about caring for a person with Parkinson's in hospital.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3            Core 2 level 3            Core 3 level 2            Core 5 level 3            HWB2 level 3            HWB3 level 2            HWB4 level 3            HWB5 level 3            HWB6 level 3            G1 level 2</p>

## Senior practitioner/expert nurse (Level 7)

### Identification

Provides expert advice on complex cases.

Leads the development of local and regional initiatives to ensure people with Parkinson's are managed effectively in hospitals.

### In patient care – acute setting Interpersonal skills

Leads and develops in-patient nursing management and reviews, advises or alters patient treatment plans in collaboration with MDT.

Is responsible for the clinical management of people with Parkinson's disease and advises on the future direction and management of services.

Identifies service deficits and develops strategic plans for the service.

Writes and reviews local protocols/guidelines in line with national recommendations.

Reviews medication and ensures appropriate changes are made.

## Specialist competency 13: developing expert practice

Competent nurse (Level 5)	Experienced/proficient nurse (Level 6)
<p><b>Programming</b></p> <p>Develops an understanding of the patient programmer in relation to deep brain stimulation (DBS) system.</p> <p>Shows awareness of potential adverse effects due to the patient programmer/DBS.</p> <p>Awareness of potential lifestyle and health care implications for patients due to the DBS system.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 2 level 3</p> <p>HWB6 level 3</p> <p>HWB7 level 3</p>	<p><b>Programming</b></p> <p>Programmes DBS system as instructed by senior nurse/medical colleagues and recognises side effects of stimulation, and reports to senior staff accordingly.</p> <p>Provides information to the patient/carer about the interaction between DBS and medication.</p> <p>Demonstrates ability to teach the patient/carer how to use the patient programmer, where appropriate.</p> <p>Documents and reports all effects of the DBS using locally agreed documentation.</p> <p>Understands the importance of educating the patient about potential lifestyle and health care implications of the DBS system.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3</p> <p>HWB1 level 2</p> <p>HWB3 level 2</p> <p>HWB4 level 3</p> <p>HWB7 level 3</p>

## Senior practitioner/expert nurse (Level 7/8)

### Programming

Undertakes specialist comprehensive assessment, and interrogates the DBS system. Interprets findings appropriately, using the information to plan a treatment strategy of stimulation titration alongside medication adjustment, according to locally agreed guidelines/policy.

Involves the patient/carer in discussions regarding treatment options for stimulation and medication in relation to therapeutic effects and side effects.

Leads therapy planning for patient, demonstrating expert understanding of the interaction between stimulation and medication and arranging follow-up.

Educates health professionals to programme DBS systems and interpret findings.

Contributes to discussions to establish whether it is appropriate for a patient to manage a patient programmer, and instructs the patient/carer in its use.

Documents effects of DBS and parameter settings following specialist assessment, and develops protocols/pathways on DBS systems at local and national levels.

Fully understands the implications of DBS on lifestyle and healthcare, and educates patients/carers/health professionals on these issues.

## Specialist competency 13: functional surgical management

Competent nurse (Level 5)	Experienced/proficient nurse (Level 6)
<p><b>Surgery: pre/post-operation</b></p> <p>Shows awareness of patient journey through functional surgery.</p> <p>Prepares patient for functional surgery following locally agreed protocol.</p> <p>Maintains patient safety with an awareness of potential complications following DBS surgery. For example:</p> <ul style="list-style-type: none"> <li>■ infection</li> <li>■ haemorrhage</li> <li>■ confusion.</li> </ul> <p>Follows guidelines for patient management following functional surgery and documents/reports events appropriately.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 1 level 3            Core 2 level 3            Core 3 level 3            HWB3 level 1            HWB5 level 3            HWB7 level 3</p>	<p><b>Surgery: pre/post-operation</b></p> <p>Performs and assists in the co-ordination for preparing the patient for functional surgery.</p> <p>Understands the significance/implications of complications due to the DBS system, and reports these in an appropriate and timely fashion.</p> <p>Manages the patient in relation to their Parkinson's and DBS surgery to promote best patient outcomes.</p> <p><b>Indicative KSF dimensions and levels:</b></p> <p>Core 2 level 3            Core 3 level 3            HWB7 level 3</p>

## Senior practitioner/expert nurse (Level 7/8)

### Surgery: pre/post-operation

Advises and counsels patients pre- and post-DBS surgery.

Develops guidelines, protocols and care pathways for local and national use in relation to pre and post-procedures for DBS surgery.

Educates health professionals about complications related to DBS surgery.

Assesses and supports the patient through the various stages of the patient's surgical journey.

Develops best practice guidelines to ensure patient safety, and promotes optimal care to ensure best patient outcomes.
