

# SCHWEPPE'S

## New Patent Syphons.

---

J. SCHWEPPE & CO., LIMITED, would call attention to the **SPECIAL ADVANTAGES** of their Patent Porcelain-lined Syphons:—

1. **STABILITY** - A more perfect exclusion of atmospheric air removes a common factor of change and "deadness of taste" from Syphon waters.
2. **PURITY** - - Easier access to all internal parts of the Syphon ensures purity of each empty vase before re-filling.
3. **CONSERVANCY** The Syphon being protected by non-metallic linings, the common contamination of Syphon water with lead, copper, tin, etc., cannot occur.
4. **UNIFORMITY** - Freedom from compressed air enables the draught to be continuous and definite to the end.

### A NEW PATENT SYPHON BOTTLE.

J. SCHWEPPE AND CO., LTD., 51, BERNERS STREET, W.

Not only is there an element of novelty in the construction of these Syphons, but, what is of greater importance, they are so made as to reduce to a minimum any chance of contamination with objectionable metals. The Syphon heads are lined with porcelain or similar material, and the Syphon is charged by means of an orifice at the bottom of the bottle, so that the jamming of the head necessary for re-filling—a process which so often results in the cracking of the lining—is entirely avoided. Messrs. Schweppe's attention to an important matter of this kind is evidence of their desire to place before the public mineral waters of a high standard of purity.—"*Lancet*," December 12th, 1891.
