

be preserved in the book for future reference if necessary. This latter also contains a loose flap pocket for odd papers, and the pencil is secured in the handiest possible position; a daily almanack is also included, so that we feel sure our medical friends will find this is a very useful compendium of their daily calls.

Inventions, Preparations, &c.

IN these days of adulteration, when coffee is mostly composed of chicory, mustard is mostly tumeric, &c., and the generality of other articles of every-day use are adulterated in proportion, it is pleasing to meet with an article which substantiates the claim of its makers as being absolutely pure, and this we find to be the case with the cocoa manufactured by Messrs. De Jong and Co., and which can be obtained from any of the leading grocers, &c. The price will be found to compare favourably with that charged by other leading makers. The chief characteristics of De Jong's Cocoa, is the care taken in its composition, everything but pure cocoa being rigidly excluded. Even only a portion of the cocoa bean is used by the makers in their desire to obtain and deal only with the best, and this part of its manu-

facture is one calling for the exercise of the greatest care on our part, as some makers we could point to advertise their preparations as being absolutely pure, when it is well known that the shell or husk, kernel, &c., are all ground up together, thus making up the bulk, but a large portion of which is perfectly indigestible, as it contains a superabundance of bile-producing fatty matter. But this fat is rigidly eschewed in De Jong's preparations, as medical men agree that it is in various ways harmful to the system. Cocoa is now becoming so much more an article of every-day use than it has been in the past that the public are more alive to its various qualities, and can so discriminate between the different kinds, that in the end the best will be sure to have the ascendancy over the others; and in order to give all a fair opportunity of testing, Messrs. De Jong's will send a sample tin free to any applicant (address De Jong's Depot, 14, St. Mary Axe, London, E.C.). We heartily recommend our Nursing and other friends to take an early opportunity of making themselves personally acquainted with its merits.

MESSRS. ROBINSON AND TAYLOR, the London Pen Company, 16, Holborn Bars, London, E.C., invite our attention to the A. S. Cross Stylographic and Fountain Pens, for which they are

ROOT'S CUCA COCOA AND CHOCOLATE.

"Your Cuca Cocoa is, in my opinion, a most invaluable beverage. It is a nerve, blood, and muscle tonic of high value. It possesses remarkable restorative properties, as I can testify to from personal experience. It is a useful 'Pick Up' after illness. Its stimulating and nourishing properties render it extremely serviceable in the lying-in room, and I can strongly recommend its daily use to nursing mothers as a splendid milk-producer. It forms a capital diet for weakly children. In brief, it is the best preparation of Cocoa yet put upon the market.

"Yours faithfully—, M.R.C.P.E., &c."

"THE LANCET," Oct. 3rd, 1891.

"This is an excellent Cocoa. In this novel preparation there are contained two substances of very definite therapeutical value—a renowned restorative and a powerful stimulant and tonic."

ROOT & CO., LIMITED,

38, Great Russell Street, London, W.C.
