Project funded by NIHR Health Service & Delivery Research Grant 13/114/60

# Background

Qualitative evidence synthesis (QES):

- Increasingly popular
- Several approaches.

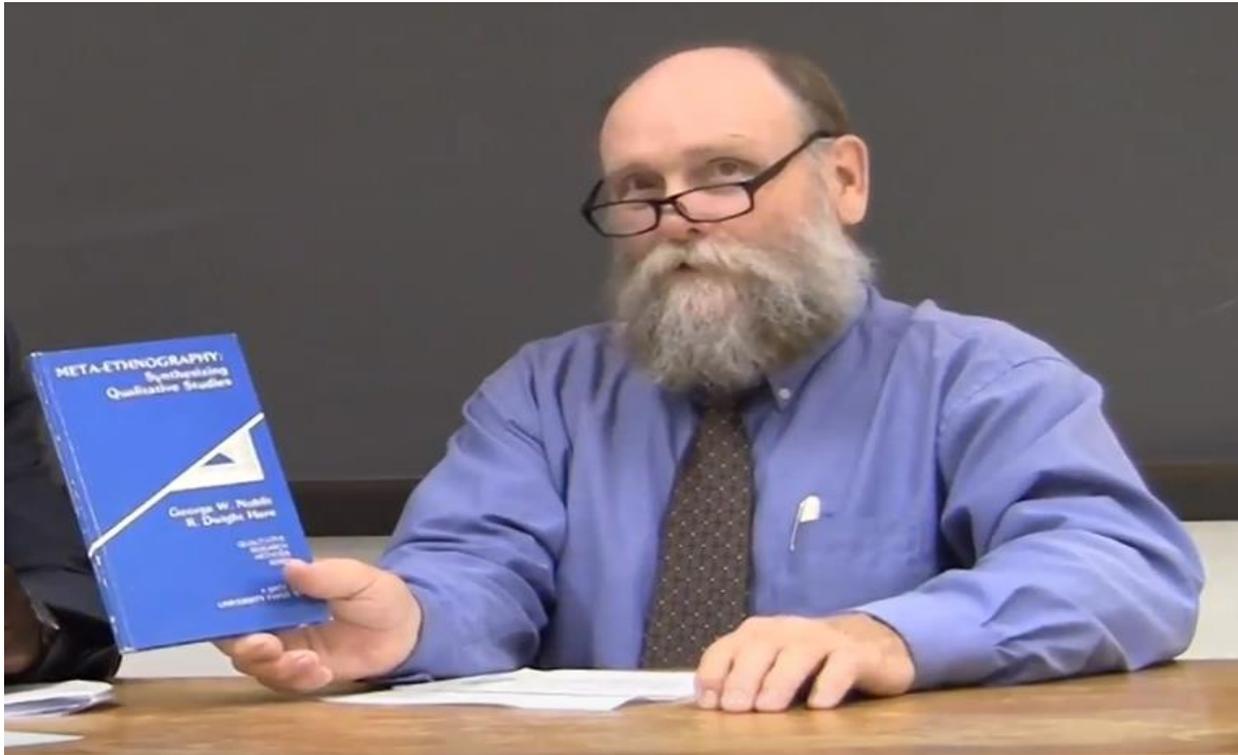

Meta-ethnography (ME) (Noblit & Hare 1988) most cited approach but:

- Often poorly reported reducing potential impact of ME findings on practice and policy.

Meta-ethnography  
Reporting Guidance

George W. Noblit

Noblit & Hare (1988). *Meta-ethnography: synthesizing qualitative studies*. Beverly Hills: SAGE Publications.

# 7 phases of meta-ethnography

**Phase 1: Getting started**

**Phase 2: Deciding what is relevant to the initial interest**

**Phase 3: Reading the studies**

**Phase 4: Determining how studies are related**

**Phase 5: Translating the studies into one another**

**Phase 6: Synthesizing translations**

**Phase 7: Expressing the synthesis**

# Guidance development process

## Stages

## Outputs

# Stage 1: Review of good practice

Aim & Methods: Systematic methodological review to identify good practice in ME.

Findings: 57 items included in review.

Identified where:

- Methodological clarity needed.
- Reporting guidance needed.

## Stage 2: Review of current practice & information needs of ME users

Aim: Define good practice principles & standards in ME reporting.

### Methods:

- Documentary analysis of sampled ME reports (Part 1)
- Interviewee analysis of these reports by potential end users (Part 1)
- Audit of published ME reports (Part 2).

## Stage 2: Part 1

Documentary & interviewee analysis: 29 ME reports and 14 potential end users.

Overall findings include:

- End users & academics can value different reporting aspects.
- Difficult to identify clear boundaries between the ME Phases.

## Stage 2: Part 2

Audit of published MEs against 109 potential draft reporting standards.

Purposive sample (n=40) of ME reports.

Data descriptively analysed.

Qualitative auditor feedback e.g. ambiguous standards.

### Findings:

- Some sampled reports not recognisably ME.
- Provided systematic in-depth insight into:
  - Where reporting needed improved in practice.
  - How ME was evolving.

## Stage 3: Agree guidance

Aim: Gain consensus on key reporting ME standards

Methods:

- Online expert & stakeholder workshop (n=31) (Part 1)
- eDelphi consensus studies (Part 2).

## Stage 3: Agree guidance

### E-Delphi (Part 2):

- Used platform previously designed for online use
- Two identical studies – experts & stakeholders
- 62 participants completed 3 rounds
- Reached consensus on:

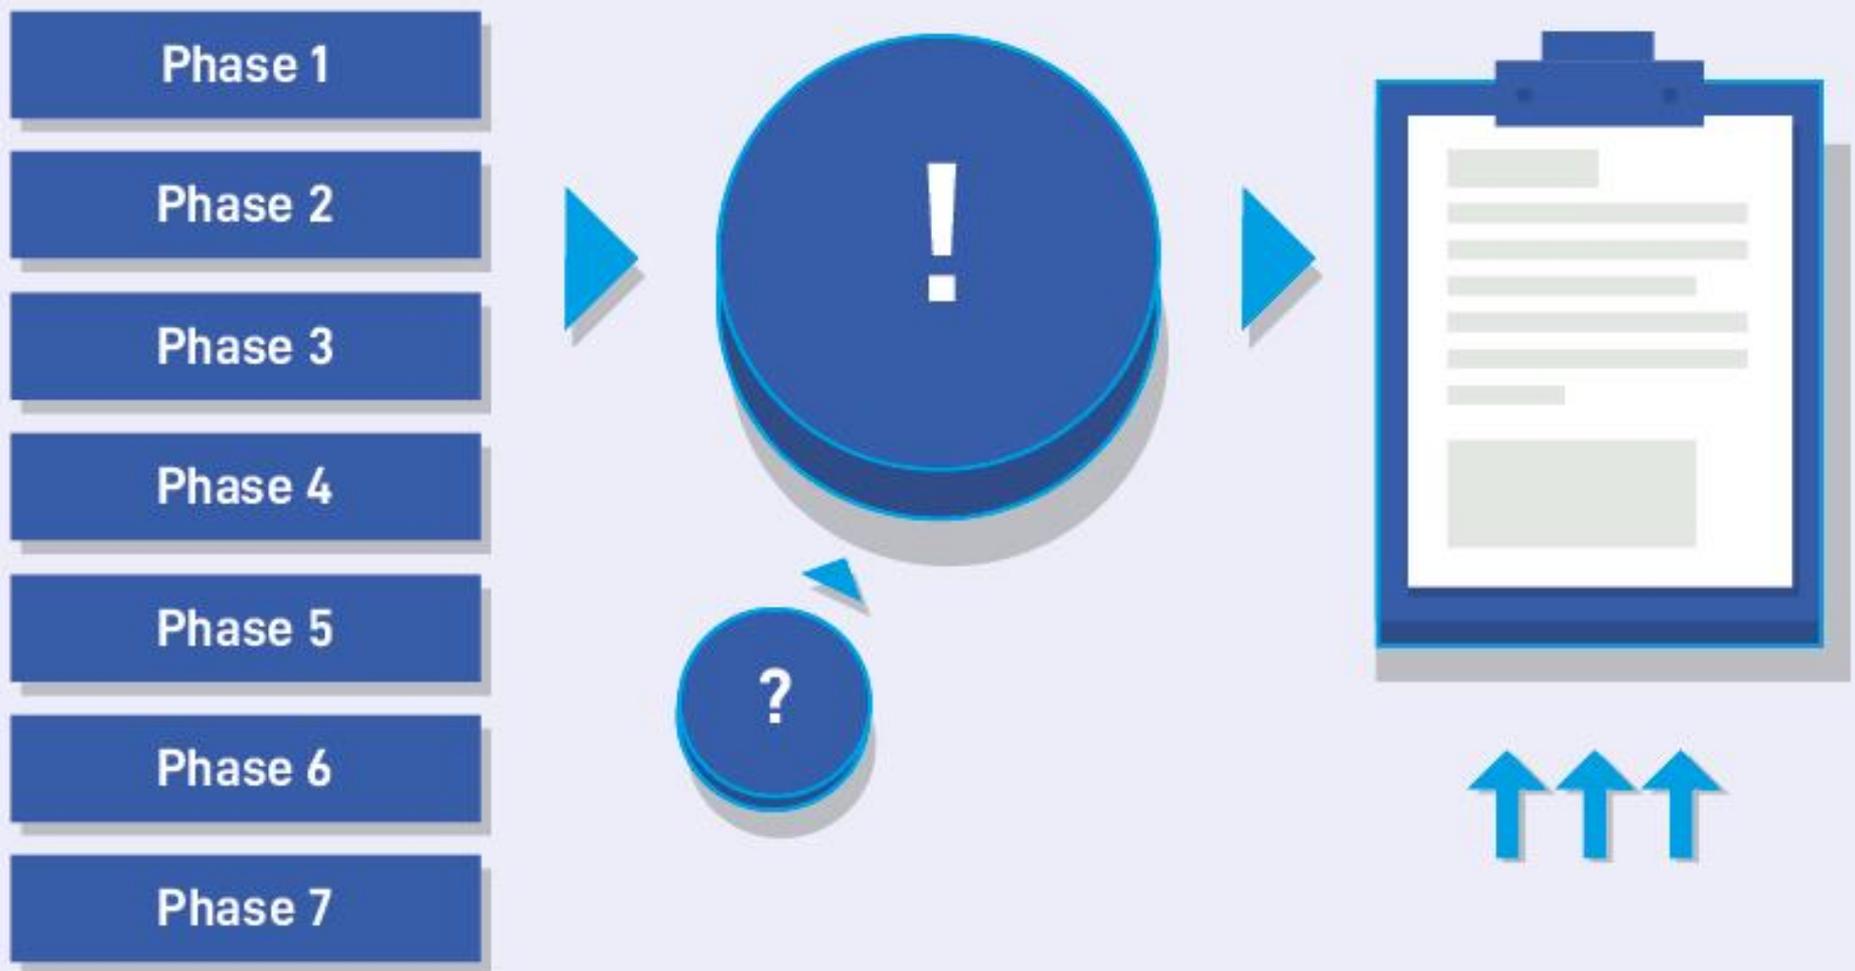

62/69 items!!!

**Abstract**  
**Aims:** The aim of this study was to provide guidance to improve the completeness and clarity of meta-ethnography reporting.  
**Background:** Evidence-based policy and practice require robust evidence syntheses which can further understanding of people's experiences and associated social processes. Meta-ethnography is a rigorous seven-phase qualitative evidence synthesis methodology, developed by Noblit and Hare. Meta-ethnography is used widely in health research, but reporting is often poor quality and this discourages trust in and use of its findings. Meta-ethnography reporting guidance is needed to improve reporting quality.  
**Design:** The eMERGe study used a rigorous mixed-methods design and evidence-based methods to develop the novel reporting guidance and explanatory notes.

# Conclusions

- 1<sup>st</sup> bespoke evidence-based meta-ethnography reporting guidance
- Should improve reporting, possibly conduct
- Advanced the methodology

## Next steps:

- monitor reporting
- record feedback on guidance
- revise guidance.
