Notes:

Source: Health and Social Care Information Centre data released to the Royal College of Nursing July 2016

HSCIC says: “The nationality field available within the Electronic Staff Record (ESR) system upon which these figures are based, contains self-reported information from individual employees. Nationally over 100,000 NHS staff records do not contain useful data with people choosing not to specify their nationality or not asked to. In addition, as nationality is self-reported the value entered by an individual may reflect their cultural heritage rather than their country of birth. As such, these figures should be treated with a significant degree of caution.”
