Clinical Research Nurse and Midwife's (CRN/M): A key workforce at the centre of clinical research delivery

Helen Jones & Naomi Hare

Thursday 6th April 2017

Research and Development Department incorporating the Biomedical Research Centre
at Guy's and St Thomas' NHS Foundation Trust and King's College London

Context

NHS

*National Institute for
Health Research*

- Large growth of research nurse workforce within the NHS over the last 15 years in response to the development of a national infrastructure.
- Now present within most NHS Trusts across UK.
- Sporadic workforce publications so minimal knowledge available as to the size and structure.
- Individual groups have developed which encompass parts of the workforce including the UKCRF and a national group of Lead research nurses.

Local context

NHS

*National Institute for
Health Research*

- Similar picture at GSTFT
- Growing research nurse workforce
- Large amount funded by NIHR and managed via R &D department
- Many roles funded by other sources such as commercial income and research grants
- Research nurses present across all directorates with a mixture of research teams and some individual research nurse posts

Research Nurse Audit (2011)

National Institute for
Health Research

- Audit carried out October 2011
- Questionnaire sent to all Research Nurses
- Employed by GSTT or KCL
- Workforce size = 121 post holders

Band 6 = 32% (38/121)

Band 7 = 49% (59/121)

Band 8a = 6.5% (8/121)

KCL appointed = 9% (11/121)

Rationale for 2016 audit

*National Institute for
Health Research*

	Interventional studies	Observational studies	Interventional recruitment	Observational recruitment	Total recruitment
2010/11	136	92	2083	3720	5803
2011/12	165	147	3021	5884	8905
2012/13	186	189	3644	10,140	13,784
2013/14	209	213	3989	9711	13,700
2014/15	228	231	6395	16,792	23,187
2015/16	236	258	13,220	14,593	28,307

Research Objectives

NHS

*National Institute for
Health Research*

1. Quantify the size of the workforce
2. Identify working patterns & management structures
3. Explore core elements of the role
4. Review qualifications & identify training needs
5. Understand the caseload of research nurses & midwives
6. Raise the profile of the workforce locally and nationally

Development of a novel survey tool

- Scoping email to other NHS sites
- Novel survey tool developed with open and closed questions
- Tool refined with pilot work

Research design & data collection

- Total population sampled
- Electronic format
- Administered over 5 week period during 2016

Results: Sample characteristics

National Institute for
Health Research

	<i>N</i>	<i>%</i>		<i>N</i>	<i>%</i>
Total Number of Participants	118		Length of time in current role		
Role title			Less than one year	36	31%
Research Nurse	85	72%	>1 - 3 years	41	35%
Research Midwife	8	7%	>3 - 5 years	21	18%
Research Matron	10	8%	> 5 years	19	16%
Other (all nurses)	7	6%	Qualifications		
AfC Band			Nursing or Midwifery Diploma (Inclu Post Grad)	52	44%
Band 5	2	2.0%	Nursing or Midwifery Degree	69	60%
Band 6	50	42.0%	Masters	22	19%
Band 7	56	48.0%	PhD	2	2%
Band 8a	9	8.0%	BSc/ MSc- Non-nursing	8	7%

Results: Non-responders

Response rate: 83% (118/143)

Reason for non-response	N
Sick leave	3
Maternity	5
Not completed	17

2. Principal Investigator for the study

■ Yes ■ No

Conclusion

NHS

*National Institute for
Health Research*

- GSTT & ECH has a large Clinical Research Nurse / Midwife workforce dispersed across numerous clinical areas.
- The workforce has grown in size by 19% over a 5 year period. Much of this appears to be with the development of further Band 6 roles.
- The workforce undertakes a variety of patient facing roles across all areas of research with the major components being patient screening, providing study information, data collection and patient education.
- Almost three quarters of the workforce have a first degree or are working towards this.
- This audit has provided a comprehensive summary of the workforce-additional work is required to better understand the research case load, competing clinical demands and to identify the burden of patient follow up.

Implications for Practice and further research

NHS

*National Institute for
Health Research*

- Important tool to raise the profile of our Research Nurses & midwives as a key workforce at the centre of our research delivery success
- Reflects local progress in establishing infrastructure including Generic job descriptions/permanent contracts review
- The Research Nurse workforce is well placed to conduct & support nurse-led research
- Identified a requirement to understand the research practitioner workforce and identify the core difference in role from nurses & midwives
- Explore the breadth, difference and complexity of the RN/M role through time & motion study and qualitative interview

Study Limitations

NHS

*National Institute for
Health Research*

- Results reflect self reported opinion rather than fact
- Validity: Snapshot in time in one Central London hospital with limited availability of other workforce surveys to compare
- Fluid and growing workforce which is always changing
- The survey tool is novel and still under development

Acknowledgements

NHS

*National Institute for
Health Research*

We would like to thank the Research Nurse
and Midwife workforce who kindly took
time to participate in this survey

Any Questions?
