

- Critical care areas are especially vulnerable to recruitment and retention problems
- Although high nursing turnover in critical  $\bullet$ care areas is evident, research into the factors that influence nurses' intentions to leave the adult critical care areas is limited. **Aim**: To explore factors which influence nurses' intentions to leave adult critical care areas • **Objective:** To systematically evaluate and synthesise the existing evidence base

CINAHL-48 PsycInfo-14 HMIC-0 Health B Elite-1 Embase-46 Pubmed-98 Total= 277

Hand searching reference list-3 Total= 976

- **Key words:** Intentions to leave, nurses, adult and critical care
- Databases: BNI, CINAHL, PubMed, PsycINFO, Embase and Health B Elite
- PRISMA flow diagram (Moher et al 2009)

- **Inclusion Criteria:** Primary research published between 2005 - 2016
- **Research appraisal:** Appraised independently by two authors utilising the NICE qualitative and quantitative checklist (2012) and Specialist Unit for Review Evidence Checklist (SURE 2016)
- **Data analysis:** Braun and Clarke (2006) thematic framework.

# **FINDINGS**

- 15 research studies were reviewed

## **LITERATURE REVIEW ANALYSIS**

<ul> <li>Quantitative data was collected from 16794 critical care nurses of 585 intensive care units from 12 different countries</li> <li>Qualitative data from 24 nurses was reported</li> </ul>		Stone et al (2006)	Study details Organisational climate and intensive care unit nurses' intentions to leave. A cross sectional study to estimate the incidence of intentions to leave due to working conditions	Reference     Dam et al (2012)	Securing intensive care: towards a better understanding of intensive care nurses' perceived work -pressure and turnover intention. A qualitative phenomenological study looking at the impacts of empowerment on critical care nurses	Tao et al (2015)	Examining perception of job satisfaction and intention to leave among ICU nurses in China. Qualitative interviews with 12 ICU nurses to determine their perspectives on the factors that influence job satisfaction and to continue working in ICU
					Dodek et al (2016)	Moral distress in intensive care unit professional is associated with profession, age and years of experience. A survey looking at the factors that are related to intensive care nursing staff perceptions on work pressure

## **IMPLICATIONS & RECOMMENDATIONS FOR PRACTICE**

- Themes identified in this literature review may influence nurses' intentions to leave or stay
- Nurse leaders and managers need to take the following steps which may

Braun V & Clarke V (2006) Using thematic analysis in psychology. Qualitative Research in Psychology 3(2), 77-101. Breau A (2014) The relationship between empowerment and work environment on job satisfaction, intent to leave, and quality of care amon **GU** nurses. Dynamics.25(3), 16-24.

Dodek P M, Wong H, Norena M, Ayas N, Reynolds S C, Keenan S P, Alden L2016) Moral distress in intensive care unit professionals is associated with profession, age, and yearsof experience. Journal of Critical Care 31(1), 178-182.

improve turnover:

- Provide a healthy work environment taking into account physical, social, cultural and psychological aspects
- Take steps to improve working relationships and resolve conflicts among staff and enhance nurse - physician collaboration
- Provide training programme and support nurses to cope with the traumatic and stressful workplace experiences associated with critical care nursing
- The literature review highlighted the need for further research and greater understanding of how these themes may impact critical care nurses
