Virtual Engagement Learning Opportunities Pilot: The Collaborative Experiences of Student Nurses in the United Kingdom and New Zealand

Hazel Cowls, Lecturer, School of Nursing and Midwifery, University of Plymouth, United Kingdom; Kim Young, Associate Professor, School of Nursing and Midwifery, University of Plymouth, United Kingdom; Michelle Honey, Senior Lecturer, School of Nursing, University of Auckland, New Zealand

Abstract
It is important for undergraduate (UG) nursing students to gain competency to practice as connected professionals and to have a global perspective on health and nursing. However, student exchanges are expensive and therefore not feasible. Senior UG nursing students from the United Kingdom and New Zealand (n=15) had the opportunity to develop an eNetwork using audio/video-conferencing. Students were allocated to a small group and given weekly discussion topics during a month long learning activity. An anonymous on-line survey comprising of Likert scale questionnaire and open ended questions provided evaluation data. Conclusion All students reported that this collaborative activity enabled them to engage purposefully with other students. While cultural differences were noted, similarities were also found and a number of students expressed interest in working overseas. Limitations included managing time differences when using synchronous audio/video-conferencing.

Background
Information and communication technology (ICT) mediums, such as Skype, can provide opportunities for engagement across the globe [1]. Health professional students, including nurses, are considered ‘digital natives’ as they utilise a range of internet-sourced communication mediums to support their knowledge development and interaction with others [2]. Extending the use of ICT provides an opportunity for health professional students to collaborate demonstrating international eNetwork.

Aim
The aim of the study was to provide students with a weekly e-learning activity to provide a more global perspective of nursing and healthcare utilising international e-collaboration.

Method
Small convenience sample of senior UG nursing students from both Universities (n=15).

Weekly topics discussed
Nurse education, current/future health issues, how can ICT impact on healthcare, sharing experiences

Themes
Cultural differences
International connections and future employment
Benefits of e-engagement
Limitations of e-engagement
Maintaining new relationships

Student Evaluation

Comments
“Cultural differences were interesting”
“gain insight to opportunities available once qualified in a global context”
“being able to discuss similarities and differences between nursing in the respective countries”
“timing at times was difficult”
“Building connections with nurses overseas ....”
