An Integrated Career and Competency Framework for Children and Young People’s Endocrine Nurse Specialists
Acknowledgements

We would like to thank Christine Desmond, Clinical Nurse Specialist in Paediatric Endocrinology, Royal Berkshire Hospital, Lee Martin, Clinical Nurse Specialist in Paediatric Endocrinology, The Royal London Hospital and Doris Corkin, Senior Lecturer (Education), School of Nursing, Queens University Belfast for their support in the revised 2019 edition of this document.

**Original contributors**
Special thanks to those who were involved in the development of the original 2008 edition, including the RCN Children and Young People’s Endocrine Community and RCN staff. In particular we would like to thank and recognise:

- Angela Casey RGN RSCN Dip HE B. Ed, Senior Specialist Nurse in Paediatric Endocrinology, Birmingham Children’s Hospital NHS Foundation Trust
- Kate Davies RN (Child) Dip HE BSc (Hons) MSc, Clinical Nurse Specialist in Paediatric Endocrinology, King’s College Hospital NHS Foundation Trust
- Shirley Langham MA RGN RSCN, Clinical Nurse Specialist in Paediatric Endocrinology, Great Ormond Street Hospital for Children NHS Trust
- Lee Martin RGN RN (Child) Bachelor of Nursing (Australia) Dip HE (Child) (UK), Clinical Nurse Specialist, Paediatric Endocrinology, Barts Health NHS Trust, The Royal London Hospital
- Ethel McNeill RGN RSCN BSc, Clinical Nurse Specialist in Paediatric Endocrinology, Royal Hospital for Sick Children, Glasgow
- Pauline Musson RGN RSCN, Clinical Nurse Specialist in Paediatric Endocrinology, Southampton University Hospital NHS Trust
- Jacqui Reid MA RSCN RGN, Clinical Nurse Specialist in Paediatric Endocrinology, Royal Aberdeen Children’s Hospital
- Lindsey Rigby RGN RSCN RHV Dip Nursing BSc (Hons), Congenital Hyperinsulinism Specialist Practitioner, Paediatric Endocrinology, Royal Manchester Children’s Hospital
- Jenny Walker RGN RSCN, Children’s Endocrine Nurse Specialist, Leeds General Infirmary
- Mandy Whitehead RGN RSCN, Clinical Nurse Specialist in Paediatric Endocrinology, Leeds Teaching Hospitals NHS Trust

**We also want to acknowledge the work of:**

- Dr Justin Davies MD FRCPCH MRCP, Consultant Paediatric Endocrinologist, Southampton University Hospital NHS Trust
- Also valuable contribution from Lindsey Rigby, Lee Martin and Jenny Walker, recognising their support in developing the revised 2013 edition of this document.

Glossary
Introduction

Competence can be defined as: “The state of having the knowledge, judgement, skills, energy, experience and motivation required to respond adequately to the demands of one’s professional responsibilities” (Roach, 2002, p54).

According to the Health and Safety Executive (HSE, 2015) competence in health is the combination of training, attitude and physical ability to perform a task safely.

The changing context

The fields of nursing are highly specialised, and subject to dramatic change as innovations and new techniques are adopted. The RCN Children and Young People’s (CYP) Endocrine community believes that professional advice and support are required for nurses developing their roles in a dynamic and rapidly advancing field.

The competency framework has been developed in this context, as well as taking into account other professional and political factors such as:

- Agenda for Change
- the need for leadership in specialist nursing
- the need for the development of UK-wide standards in paediatric endocrine nursing
- the first NHS Mandate (DH, 2012) and its equivalent in Scotland, Wales and Northern Ireland, revised England 2017-18 and 2018-19
- the increased focus on work-based and lifelong learning plus supervision
- increasing patient and user expectations
- the inconsistency of provision and access to paediatric endocrine nursing education in the UK
- the need for professional accreditation of skills and knowledge in practice
- the national service frameworks and service modernisation

Agenda for Change

Agenda for Change (AfC) was implemented in the NHS, across the UK, in December 2004. It was the biggest overhaul of NHS-wide pay, terms and conditions in more than 50 years. It applies to all NHS organisations and therefore sets a UK framework for pay, terms and conditions of employment.

AfC and the NHS Knowledge and Skills Framework (NHS KSF) means that all staff will have clear and consistent development objectives; can develop in such a way that they can apply the knowledge and skills appropriate to their level of responsibility; and are helped to identify and develop knowledge and skills that will support their career progression.

Under AfC, jobs are evaluated using a bespoke NHS job evaluation scheme. This gives each job a ‘weighting’ that then determines where each job slots into the pay bands. Common job profiles are applicable across the UK. Each pay band has a number of pay points. Staff below the maximum point can expect to progress to the next point each year.

There are two points on each pay band called gateways where staff knowledge and skills are assessed using the knowledge and skills framework. Pay progression at the gateways is linked to the demonstration of applied knowledge and skills to support continuing professional development. The presumption in the NHS KSF is that staff will pass through these gateways unless there are reasons as to why they shouldn’t.

For more comprehensive information on AfC please refer to [www.rcn.org.uk/agendaforchange](http://www.rcn.org.uk/agendaforchange). This site is your guide to the ins and outs of the pay, terms and conditions for the NHS. It will help you to understand AfC, how it was developed and how you can make the most of the system, particularly the NHS KSF.
Children's endocrinology – children's hormones – covers a wide range of illnesses and disorders, varying from minor disorders to severe life-threatening conditions. The most common disorder seen in a children's endocrine clinic is short stature. The National Institute for Health and Care Excellence estimates that that the prevalence of growth hormone deficiency is estimated to be between one in 3,500 and one in 4,000 children (NICE, 2010). Congenital hypothyroidism has an even higher incidence and every newborn baby in the UK is now tested for it (Raine et al., 2011). It is therefore clear that the need for specialist children's endocrine services is paramount, and it is suggested that these patients would benefit from the care provided by specialist children's endocrine nurses.

Most children or young people can maintain a normal, healthy lifestyle with the assistance of hormone replacement. However, this can only be gained through accessing specialist children's endocrinology services, where the position of a nurse specialist is paramount. Links from primary, secondary and perhaps tertiary care can be formed, as well as links with schools and multidisciplinary agencies. Conditions can be congenital or acquired, and can sometimes be lifelong, necessitating seamless links into adult endocrine services. The NICE guideline Transition from children's to adult services for young people using health or social care services aims to help young people have a better experience of transition with a named worker who can coordinate and support their transition care (NICE, 2016).

The children and young people’s endocrine nurse specialist role

The intricate detail of the role and what is expected is reflected in the specific competency framework in section 5. The children’s endocrine nurse specialist should be working towards the aims in the mission statement for the RCN CYP Endocrine community:

“To offer support, advice and expertise to nurses and professionals working with children, young people and their families with an endocrine disorder.”

Through this, optimum nursing care should be delivered. In essence, the children's endocrine nurse specialist should:

- promote excellent practice in the assessment, diagnosis, treatment and transition of children and young people and their families with an endocrine disorder
- be the first point of contact and principle keyworker/advocate for children and young people and their families with an endocrine disorder
- act as principle liaison for the GP, health visitor, school nurse, and other members of the multidisciplinary team to ensure a smooth provision of optimum care
- support and counsel the child/young person and their family by providing teaching, ongoing support (by nurse-led clinics, telephone, text message and email, according to local hospital policy), access to specialist support networks, and referral to other professionals when necessary
- provide education and training to other disciplines in the community where necessary. For example, providing training in the administration of emergency IM hydrocortisone to school nurses and teachers
- practise as key member of the local multidisciplinary team, leading in the development of key policies, protocols and standards, through research and audits.

Qualifications

The children's endocrine nurse specialist should be a nurse with a children's nursing qualification and registered as such on the Nursing and Midwifery Council (NMC) register, with additional paediatric endocrine theoretical and practical knowledge. It is envisaged that the children's endocrine nurse specialist acting in the expert role should be practising at master's degree level, with the view to working towards such a qualification.
Support and development

Establishing local and national links is paramount to functioning effectively as a children’s endocrine nurse specialist. Links should be made with the local paediatric multidisciplinary team, and also adult endocrine services, to initiate effective transition services. It is important that endocrine nurse specialists work in partnership with children, young people and their families, in order that good clinical decisions may be made and together they are able to decide on the best care from a fully informed position.

Effort should be made to join the RCN CYP Endocrine Community, and also the British Society for Paediatric Endocrinology and Diabetes (BSPED) nurses group. Annual meetings are an effective way of networking and forming valuable professional relationships. Additional nurse meetings are run by the different pharmaceutical companies, offering opportunities to share clinical expertise, research and practice. Such meetings and conferences are essential in benchmarking and appreciating other roles. Links can also be formed with the European Society Paediatric Endocrine Nurses EPSEN and American Paediatric Endocrine Nursing Society (PENS), if UK children’s endocrine nurse specialists have the opportunity to travel to their meetings.
2. Purpose and scope of the framework

This competency framework was developed by the RCN CYP Endocrine Community to enhance the clinical care that children and young people with an endocrine disorder receive. There are only approximately 80 children’s endocrine nurses in the UK, and it is imperative that specific competencies are outlined. To achieve the appropriate care, nurses must be deemed to function at an optimal level, and “assessing competence in clinical practice is of paramount importance” (Gibbon and Luker, 1995; NMC, 2015). By formulating a competency framework from which a children’s nurse specialist can work, it is envisaged that their development as a professional practitioner can be enhanced.
3. How to use the framework

The framework focuses on knowledge, skills and interventions that are heightened in, or specific to, nurses working in children’s endocrine nursing. Although the intention is for this framework to have a stand-alone function, it should be used in conjunction with other frameworks that focus on core skills and competencies for all qualified nurses. In addition the specific frameworks developed by specialist nurses can be used to support and enhance their nursing practice.

Benefits of the framework

The competency framework provides benefits for nurses, their employers, patients and the public.

Nurses benefit because it helps them to:
- deliver consistently high standards of care
- identify their level of practice and plan a career in a more structured way
- pinpoint their personal education and development needs
- realise their potential more effectively
- seize opportunities to influence the direction of nursing.

Employers benefit because it provides:
- a model to ensure consistently high standards of care
- clearer insight into the expertise and competence of staff, for example, in the assessment of risk management
- assistance in organisational planning.

Patients and the public benefit because it makes it possible to deliver:
- consistently high standards of patient care
- increased effectiveness of service provision
- improved access and choice for care provision.

Using the framework

Rather than practice being strictly questioned, it should be used as a tool to plan clinical aims and objectives. It can also be used for a personal development plan, and used by mentors and managers in the performance appraisal process. This needs to be used with reference to local and national guidelines, incorporating the NHS KSF and National Occupational Standards.

It should be used for:
- assessing clinical competence at differing levels
- developing personal goals and objectives
- performance appraisal
- supporting job descriptions and pay reviews/negotiations by detailing targets in accordance with local and national guidelines and policies.

However, it must be recognised that a nurse specialist working in the field of children and young people’s endocrinology undertakes a vast role. Not every nurse specialist has the same job description, and therefore not every competency is relevant to each practitioner. For example, not every endocrine nurse specialist undertakes dynamic endocrine function testing.

Therefore, it must be made clear which competencies are relevant when this framework is used as an organisational tool. The document is a starting point, and practitioners using the framework need to ensure that they keep up to date with changes in legislation, policy and practice that can impact on their role, in line with the NMC Code (NMC, 2015).

Overview and sources

The primary sources for this document are as follows: RCN Competencies: A Competency Framework and Guidance for Developing Paediatric Epilepsy Nurse Specialist Services (RCN, 2005); Paediatric Diabetes: RCN Guidance for Newly Appointed Nurse Specialists (RCN, 2013); Benner novice to expert model according to the Dreyfus Model of Skill Acquisition (Benner, 2005); and Key Elements of the Career Framework (Skills for Health, 2006; 2010).

The principle concept to focus on is that the “Dreyfus definition of competence is based on how people approach their work, not on whether they should be judged as qualified to do so”
(Eraut, 1994). Links to the NHS KSF have also been explored, by concentrating on the ‘novice’ (competent nurse but novice in specialty), ‘competent’ (experienced nurse) and ‘expert’ (senior practitioner). These are drawn up against the levels 5 to 7. A full list of references, further reading and useful websites are included at the end of this document.
4. Specialist competencies

The children's and young people's endocrine nurse specialist competency framework is presented in the tables in section five. The children’s endocrine nurse specialist should be working at an ‘expert’ level (levels 3/4 in NHS KSF guidelines) within children’s nursing. The levels of competence, which had previously been based on Benner’s novice to expert continuum, have been translated into RCN Competencies: Integrated core career and competence framework for registered nurses (RCN, 2009). The levels in this framework refer to competent, experienced and senior or expert practitioner. They align to levels 5, 6 and 7 of the Career framework for health (Skills for Health, 2006). These levels refer to a lifelong learning continuum and do not directly correlate with the AfC pay bands.

Progression through the levels will obviously be different for each nurse, depending on context, level of skill, performance appraisal, and individual objectives. However, it is envisaged that movement towards becoming an experienced practitioner (level 6) should occur after being in post for approximately 18 months to two years. Dependent on the patient population, workload, and individual needs, the children’s endocrine nurse specialist should be achieving ‘expert’ (level 7) status after approximately five years in post. It should be stressed that nurses should always be working to advance their practice. Even in the early 1990s, the United Kingdom Central Council for Nursing, Midwifery and Health Visiting (now the NMC) 1992 Code of Conduct clearly described how all nurses, midwives and health visitors must endeavour always to achieve, maintain and develop knowledge, skills and competence (Lillyman, 1998), and this is echoed in the new, updated version (NMC, 2015).

Formulating the differing competencies was a challenge because there are so many cross-overs in skills and abilities and differing role needs. Levels 5, 6 and 7 of the key elements of the career framework are used as previously described. They range from practitioner, senior/specialist practitioner and advanced practitioner.

Care of children and young people with growth and endocrine disorders

The competencies in section 5 outline four stages of care requirements:

- during the period where the diagnosis is not yet confirmed
- once the diagnosis is confirmed
- endocrine testing
- transition to adult services.

Nursing considerations and understanding children and young people with growth and endocrine disorders

- factors influencing growth and puberty
- auxology
- assessment of skeletal maturity
- physiology and pathology.

The following competencies have been researched by the RCN CYP Endocrine Community, and are included in Core competencies for nursing children and young people (RCN, 2012). Therefore, focus within this framework is directed solely at paediatric endocrine practice only. The framework addresses the following areas for children’s endocrine nurse specialists:

- relationships with children and young people with endocrine disorders and their families
- personal planning and organisation
- working in different health and social environments
- accountability
- teaching and sharing knowledge
- research and audit
- relationships with professionals
- professional and personal development.
**Practical applications**

This framework has a multi-faceted purpose. It is a personal tool to form individual goals and objectives to advance nursing practice continually – both personally and professionally. It can also be used as a management tool. In this way, the RCN framework can be used against national NHS frameworks in the performance appraisal process. This will ensure that children’s endocrine nurse specialists are banded in AfC fairly and equally throughout the UK, while operating within their scope of professional practice. Such continual practice is echoed by Eraut (1988):

“Part of a professional’s capacity involves being able to:

- develop or transform one’s own practice over time, to
- create new knowledge through one’s own practice, as
- well as learning from others” (Eraut, 1998).

It is stressed that this method for enhancing nurses’ clinical, practical and professional skills is the way forward in advancing and enhancing specialist nursing practice. It has been described that “the competence-based approach to education has been heralded as an objective assessment method, facilitating distinctions in levels of competence when a variety of sources of evidence are used to support judgements concerning performance” (Percival et al., 1994; cited by Gibson and Soanes, 2000).

**Next steps**

The RCN CYP Endocrine community welcomes constructive feedback on the framework, both nationally and internationally, in the hope that further developments and ideas can be incorporated into future versions.

Please contact:

Fiona Smith, Professional Lead for Children and Young People’s Nursing, Royal College of Nursing, 20 Cavendish Square, London W1G 0RN

<td>• Knows how to critically appraise available research to inform the evidence base used to develop the protocols.</td>
<td>Organised. Critically analytical.</td>
<td>Skills for Health competences: CHS170.</td>
</tr>
<tr>
<td></td>
<td>Provide advice on all aspects of endocrine tests at local and regional level.</td>
<td></td>
<td>Records are kept of all advice given, including when and to whom. Advice provided is clear, accurate and within own local sphere of influence.</td>
<td>• Knows relevant anatomy and physiology. • Has indepth knowledge of all aspects of endocrine tests, and potential adverse reactions.</td>
<td>Obsessive.</td>
<td>Empathetic with children and families.</td>
</tr>
<tr>
<td></td>
<td>Carry out endocrine tests adhering to organisational policies and procedures.</td>
<td>HWB6 level 4</td>
<td>Keep clear documentation of endocrine tests undertaken.</td>
<td></td>
<td></td>
<td>Skills for Health competences: CS4.</td>
</tr>
<tr>
<td></td>
<td>Initiate new tests where indicated and appropriate using standard operational procedures.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Accept direct referrals from other consultants as agreed by local protocols.</td>
<td></td>
<td>Clear documentation is kept of referrals received.</td>
<td>• Knows relevant local protocols, referral pathways and their own limitations.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Supervise nursing and medical practitioners undertaking tests.</td>
<td>IK2 level 3 HWB6 level 4</td>
<td>Evidence of supervision is provided to demonstrate continuing professional development.</td>
<td>• Has indepth knowledge of all aspects of endocrine tests.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Interpret results and act appropriately as indicated.</td>
<td></td>
<td>Discussions are held with the MDT of the need for further tests or to initiate/change treatment regimens.</td>
<td>• Knows the normal values of endocrine biochemistry, treatment regimens and desired outcomes.</td>
<td></td>
<td></td>
</tr>

Endocrine courses
Paediatric Endocrine Module, Level 7: South Bank University

General courses of relevance/interest

- Teaching and assessing in clinical practice
- Counselling
- Independent and Supplementary prescribing for nurses
- Advanced assessment of the presenting child
- Care of adolescents
- BSc modules
- MSc modules
- PhD/Doctorate of Health Care.
